**Introduction**

Parasites have been responsible for considerable morbidity and mortality throughout the ages worldwide, but today they are a problem mainly in developing countries. Although parasitic infections have a particularly strong impact on immunocompromised populations, many immunocompetent individuals also suffer from these illnesses.

Although some parasites are endemic to the United States, globalization has created considerable opportunities for infected travelers to bring back parasites from foreign countries. This book was written to provide examples of a variety of situations in which parasites are suspected of causing an infectious disease. In addition to infections caused by well-known parasites, as well as new and emerging parasites, *Cases in Human Parasitology* provides cases infrequently seen in this country to alert the reader that such uncommon infections may have been imported from elsewhere.

Previously written textbooks containing cases in microbiology and infectious diseases (P. H. Gilligan et al., *Cases in Medical Microbiology and Infectious Diseases* [American Society for Microbiology, Washington, D.C., 1992, 1997, 2003]) have proven to be successful in their efforts to provide an enjoyable and challenging educational tool for the reader. The purpose of *Cases in Human Parasitology* is to present cases solely involving parasites to supplement conventional textbooks in human parasitology and to provide an interesting and educational challenge to health care scientists. I was inspired to write the text for those individuals taking college or medical school courses in parasitology, for those being trained in hospitals in this field, and for those performing parasitology work in clinical laboratories, analyzing specimens to detect and identify parasites causing human disease.

The book is designed to stimulate discussion and to challenge students while emphasizing the relationship of diagnosis to patient care. It is hoped that the reader will learn to recognize the symptoms of parasitic diseases, to correlate the patient's history (travel, etc.) and symptoms to order laboratory procedures, and to guide treatment.
The book contains 62 cases of patients presenting to emergency departments or to their physicians with symptoms of a parasitic disease. The reader must develop a differential diagnosis and decide whether or not the patient is infected with a protozoan or helminth (worm). Most cases are accompanied by a color image(s) of the parasite causing the infection.

The book is divided into five sections, each dealing with a different group of parasites: intestinal protozoa (section I), blood and tissue protozoa (section II), cestodes, trematodes, and intestinal nematodes (section III), blood and tissue nematodes (section IV), and challenging cases (section V). The section entitled “Challenging Cases” covers nonparasitic infections in patients with symptoms closely resembling, and often confused with, those of parasitic infections.

At the beginning of each section is an introduction, which provides background information relating to the cases presented in that section. The introduction includes a brief discussion of parasites in that section, providing the reader with some clues to the etiology of those infections. Each case begins with the patient’s history and symptoms. Travel history, residence, the age of the patient, seasonality, and eating habits are important in leading to the correct diagnosis and should be carefully noted. Relevant clinical findings and laboratory data are presented. The reader is asked to consider the differential diagnosis and is asked a number of questions about topics such as the following:

- the diagnosis of the illness
- the name of the parasite
- the life cycle of the parasite
- treatment, transmission, and prevention of the illness
- the epidemiology of the infection
- relevant clinical findings
- other parasites to consider in the differential diagnosis

Answers to the questions are provided at the end of each case presentation. A glossary and a list of figures are provided after section V.

The book may be used as an educational tool for educators in colleges and universities to reinforce didactic material taught in the classroom in courses in microbiology and parasitology in departments of microbiology or medical technology (clinical laboratory science); in hospital training programs in medical technology (clinical laboratory science); in programs in continuing medical education, to maintain the competence of clinical laboratory scientists doing parasitology work in clinical microbiology diagnostic laboratories and to satisfy regulatory requirements for various licensing boards; to train pathology residents and infectious disease fellows during their microbiology rotations, as well as to provide an educational tool for pathology residents preparing for board exams; and to teach first-year medical students taking courses in medical microbiology or infectious diseases and for medical students preparing for board exams. Many medical schools are currently using a case-based approach in their curriculum and have found that this method has been proven to be effective in other areas of medicine.
Acknowledgments

I thank members of the editorial staff of ASM Press for their assistance and patience during the preparation of this book. I also thank the reviewers for their comments and suggestions for improvements to the text.

Many of the illustrations were produced with the assistance of Stanley Schwartz of the Department of Pathology at the Memorial Hospital of Rhode Island. I thank him for his help. These images would not have been possible without his expertise.

for Trypanosoma brucei rhodesiense, 88
Pentatrichomonas hominis, 205–206
Phlebotomus, 64, 90 (see also Sand fly)
Pinworm, enter Enterobius vermicularis
Plasmodium, 53–54, 68, 76–77, 92, 98, 108
Plasmodium falciparum, 54, 68, 75, 75–77, 92, 98, 108
Plasmodium malariae, 92, 98, 107, 107–108
Plasmodium ovale, 92, 97, 97–98, 108
Plasmodium vivax, 91, 91–92, 98, 108
Pork tapeworm, see Taenia solium
Praziquantel
for Clonorchis sinensis, 138
for Diphyllobothrium latum, 140
for Dipylidium caninum, 154
for Fasciola hepatica, 123
for Fasciolopsis buski, 148
for Hymenolepis nana, 166
for Paragonimus westermani, 157
for Schistosoma haematobium, 135
for Schistosoma mansoni, 163
ta Taenia saginata, 126
for Taenia solium, 127
Pregnant women, toxoplasmosis in, 72
Primary amebic meningoencephalitis (PAM), 56–57, 80, 110
Propamidine, for Acanthamoeba, 84
Protozoa, blood and tissue, 53–111
Acanthamoeba, 53, 57–81, 83–85, 109, 109–111
Babesia, 54, 67, 67–69
Babesia microti, 54, 68–69
Balamuthia mandrillaris, 53, 79–81, 83–85, 109, 109–111
Babesia, 54, 67, 67–69
Babesia microti, 54, 68–69
Balamuthia mandrillaris, 53, 79–81
diagnosis, 54
Naegleria fowleri, 53, 55–57, 80–81, 110
Plasmodium, 53–54, 68, 76–77, 92, 98, 108
Plasmodium falciparum, 54, 68, 75, 75–77, 92, 98, 108
Plasmodium malariae, 92, 98, 107, 107–108
Plasmodium ovale, 92, 97, 97–98, 108
Plasmodium vivax, 91, 91–92, 98
therapy, 54
Toxoplasma gondii, 54, 71–73, 73
Trypanosoma brucei gambiense, 53, 59, 59–61, 88
Trypanosoma brucei rhodesiense, 53, 60–61, 87, 87–88
Trypanosoma cruzi, 53, 61, 93, 93–95
Protozoa, intestinal, 1–49
Balantidium coli, 1, 31, 31–33
Blastocystis hominis, 1, 9, 39, 39–41
Chilomastix mesnili, 215, 215–216

INDEX  241
Protozoa (continued)
  Cryptosporidium parvum, 1–2, 9, 12, 23, 23–25, 35, 35–37, 48
  Cyclospora cayetanensis, 2, 11–13, 24, 37, 48
  diagnosis, 1–2
  Dientamoeba fragilis, 1, 27, 27–29, 118
  Entamoeba histolytica, 1, 3, 3–6, 15, 15–17, 41, 208, 211, 211–213, 217–219
  Encephalitozoon cuniculi, 45
  Encephalitozoon hellem, 45
  Encephalitozoon intestinalis, 20–21, 45
  Endolimax nana, 28, 209, 223, 223–225
  Endolimax nana, 28
  Entamoeba coli, 208–209
  Entamoeba dispar, 4, 5, 17, 208, 211, 211–213, 217–219
  Encephalitozoon intestinalis, 20–21, 45
  Endolimax nana, 28, 209, 223, 223–225
  Entamoeba coli, 208–209
  Entamoeba dispar, 4, 5, 17, 208, 211, 211–213, 217–219
  Encephalitozoon intestinalis, 20–21, 45
  Endolimax nana, 28, 209, 223, 223–225
  Entamoeba coli, 208–209
  Entamoeba dispar, 4, 5, 17, 208, 211, 211–213, 217–219
  Enterocytozoon bieneusi, 20, 44
  Giardia lamblia, 1, 7, 7–10, 24, 36, 216
  Iodamoeba bütschlii, 207, 207–209
  Isospora belli, 2, 12, 24, 37, 47, 47–49
  microsporidia, 2, 19, 19–21, 43, 43–45
  Nosema ocularum, 44
  Pentatrichomonas hominis, 205–206
  symptoms of infection, 2
  transmission, 2
  Vittaforma corneae, 44
  Pseudoterranova, 198
  Psychodopygus sand fly, 100
  Pyrantel pamoate
  for Ascaris lumbricoides, 131
  for Enterobius vermicularis, 119
  for Necator americanus, 143
  Pyrimethamine, for Toxoplasma gondii, 73
  Q
  Quinacrine, for Giardia lamblia, 8
  Quinine
  for Babesia, 69
  for Plasmodium falciparum, 77
  R
  Raccoon ascarid, see Baylisascaris procyonis
  Reduviid 11bug, 53, 94–95
  Rifampin
  for Acanthamoeba, 84
  for Naegleria fowleri, 57
  River blindness, 171, 191–192
  Roundworm, giant intestinal, see Ascaris lumbricoides
  S
  Sand fly, 53, 64, 90, 100, 104
  Schistosoma haematobium, 115, 133, 133–135, 162
  Schistosoma japonicum, 115, 134, 162
  Schistosoma mansoni, 115, 134, 161, 161–163
  Sexual transmission of disease
    Entamoeba histolytica, 17
    Giardia lamblia, 9
  Sheep liver fluke, see Fasciola hepatica
  Shigella dysenteriae, 215–216
  Simulium spp., 192
  Sodium stibogluconate, for Leishmania, 90, 101, 105
  Strongyloides stercoralis, 116, 130, 142, 149, 149–151, 156
  Sulfonamides, for Toxoplasma gondii, 73
  Suramin
  for Onchocerca volvulus, 192
  for Trypanosoma brucei gambiens, 61
  for Trypanosoma brucei rhodesiens, 88
  T
  Taenia saginata, 115, 126, 145, 145–146
  Taenia solium, 115, 125, 125–127, 146
  Tapeworms, 16–17, 115 (see also specific parasites)
    Diphyllobothrium latum, 115, 139, 139–140, 156
    Dipylidium caninum, 115, 153, 153–154
    Echinococcus granulosus, 16–17, 115, 167, 167–168
    Hymenolepis nana, 115, 165, 165–166
    Taenia saginata, 115, 126, 145, 145–146
    Taenia solium, 115, 125, 125–127, 146
  Tetracycline
  for Balantidium coli, 33
  for Dientamoeba fragilis, 29
  Thiabendazole
  for Dracunculus medinensis, 178
  for Strongyloides stercoralis, 151
  for Toxocara canis, 201
  Threadworm, see Strongyloides stercoralis
  Tinidazole, for Giardia lamblia, 8
  Toxocara canis, 172, 199–201
  Toxocara cati, 200
  Toxoplasma gondii, 54, 71–73, 73
  Transfusion-transmitted infections, 95
  Transmission, see specific parasites
  Trematodes, see Flukes
  Trichinella spiralis, 172, 187, 187–189
  Trichomonas hominis, 206
  Trychuris trichiura, 116, 130, 159, 159–160
  Triclabendazole, for Fasciola hepatica, 123
  Trimethoprim-sulfamethoxazole
    for Cyclospora cayetanensis, 12
    for Isospora belli, 49

242  INDEX
Trophozoites, see specific parasites

Trypanosoma brucei gambiense, 53, 59, 59–61, 88
Trypanosoma brucei rhodesiense, 53, 60–61, 87, 87–88
Trypanosoma cruzi, 53, 61, 93, 93–95
Tsetse fly, 53, 60, 87–88

V
Vancomycin, for Clostridium difficile, 222
Vittaforma corneae, 44

W
Whipworm, see Trichuris trichiura
Wuchereria bancrofti, 171, 181, 181–183, 186
