Molecular Genetics of Mycobacteria

2nd Edition
Molecular Genetics of Mycobacteria

2nd Edition

EDITED BY

GRAHAM F. HATFULL
Department of Biological Sciences,
University of Pittsburgh, Pittsburgh, PA 15260

AND

WILLIAM R. JACOBS, JR.
Howard Hughes Medical Institute,
Albert Einstein College of Medicine, Bronx, NY 10461

ASM Press
Washington, DC
Contents

I. GENOMES, GENOMICS, AND GENETIC EXCHANGE

1. Gene Transfer in Mycobacterium tuberculosis: Shuttle Phasmids to Enlightenment 3
   William R. Jacobs, Jr.

2. Mycobacterial Pathogenomics and Evolution 27
   Daria Bottai, Timothy P. Stinear, Philip Supply, and Roland Brosch

3. BCG Vaccines 49
   Vanessa Tran, Jun Liu, and Marcel A. Behr

   Keith M. Derbyshire and Todd A. Gray

5. Molecular Genetics of Mycobacteriophages 81
   Graham F. Hatfull

6. Genetics of Phage Lysis 121
   Madalena Pimentel
II. GENE EXPRESSION AND REGULATION

7. Sigma Factors: Key Molecules in Mycobacterium tuberculosis Physiology and Virulence  
   Riccardo Manganelli 137

8. Transcription Factor Binding Site Mapping Using ChIP-Seq  
   Suma Jaini, Anna Lyubetskaya, Antonio Gomes, Matthew Peterson, Sang Tae Park, Sahadevan Raman, Gary Schoolnik, and James Galagan 161

9. Noncoding RNA in Mycobacteria  
   Kristine B. Arnvig, Teresa Cortes, and Douglas B. Young 183

10. Two-Component Regulatory Systems of Mycobacteria  
    Tanya Parish 209

11. Regulated Expression Systems for Mycobacteria and Their Applications  
    Dirk Schnappinger and Sabine Ehrt 225

III. THE MYCOBACTERIAL PROTEOME

12. Mycobacterium tuberculosis in the Proteomics Era  
    Martin Gengenbacher, Jeppe Mouritsen, Olga T. Schubert, Ruedi Aebersold, and Stefan H. E. Kaufmann 241

13. Structural Annotation of the Mycobacterium tuberculosis Proteome  
    Nagasuma Chandra, Sankaran Sandhya, and Praveen Anand 261

14. Cyclic AMP Signaling in Mycobacteria  
    Gwendowlyn S. Knapp and Kathleen A. McDonough 281

IV. METABOLISM

15. The Physiology and Genetics of Oxidative Stress in Mycobacteria  
    Bridgette M. Cumming, Dirk Lamprecht, Ryan M. Wells, Vikram Saini, James H. Mazorodze, and Adrie J. C. Steyn 299

16. Metabolomics of Central Carbon Metabolism in Mycobacterium tuberculosis  
    Anthony D. Baughn and Kyu Y. Rhee 323

17. Mycobacterial Lipidomics  
    Emilie Layre, Reem Al-Mubarak, John T. Belisle, and D. Branch Moody 341

18. Genetics of Mycobacterial Trehalose Metabolism  
    Rainer Kalscheuer and Hendrik Koliwer-Brandl 361
19. Metallobiology of Tuberculosis  377
   G. MARCELA RODRIGUEZ AND OLIVIER NEYROLLES

20. Energetics of Respiration and Oxidative Phosphorylation in Mycobacteria  389
   GREGORY M. COOK, KIEL HARDS, CATHERINE VILCHÈZE, TRAVIS HARTMAN, AND MICHAEL BERNEY

V. GENETICS OF DRUG RESISTANCE

21. Molecular Basis of Drug Resistance in Mycobacterium tuberculosis  413
   KEIRA A. COHEN, WILLIAM R. BISHAI, AND ALEXANDER S. PYM

22. Resistance to Isoniazid and Ethionamide in Mycobacterium tuberculosis: Genes, Mutations, and Causalities  431
   CATHERINE VILCHÈZE AND WILLIAM R. JACOBS, JR.

23. The Molecular Genetics of Fluoroquinolone Resistance in Mycobacterium tuberculosis  455
   CLAUDINE MAYER AND HOWARD TAKIFF

24. Mechanisms of Pyrazinamide Action and Resistance  479
   YING ZHANG, WANLIANG SHI, WENHONG ZHANG, AND DENIS MITCHISON

25. Genetic Strategies for Identifying New Drug Targets  493
   ANDREJ TRAUNER, CHRISTOPHER M. SASSETTI, AND ERIC J. RUBIN

VI. GENETICS OF MEMBRANE AND CELL WALL BIOSYNTHESIS

26. Genetics of Peptidoglycan Biosynthesis  513
   MARTIN S. PAVELKA, JR., SEBABRATA MAHAPATRA, AND DEAN C. CRICK

27. Genetics of Mycobacterial Arabinogalactan and Lipoarabinomannan Assembly  535
   MONIKA JANKUTE, SHIPRA GROVER, HELEN L. BIRCH, AND GURDyal S. BESRA

28. Genetics of Capsular Polysaccharides and Cell Envelope (Glyco)lipids  559
   MAMADOU DAFFÉ, DEAN C. CRICK, AND MARY JACKSON

29. The Molecular Genetics of Mycolic Acid Biosynthesis  611
   JAKUB Pawełczyk AND LAURENT KREMER
VII. GENETICS OF MACROMOLECULAR BIOSYNTHESIS

30. Nucleotide Metabolism and DNA Replication  635
   Digby F. Warner, Joanna C. Evans, and Valerie Mizrahi

31. Double-Strand DNA Break Repair in Mycobacteria  657
   Michael S. Glickman

32. The Pup-Proteasome System of Mycobacteria  667
   Nadine J. Bode and K. Heran Darwin

33. Mycobacterium tuberculosis Serine/Threonine
    Protein Kinases  681
   Sladjana Prisic and Robert N. Husson

VIII. THE MYCOBACTERIAL LIFESTYLE, PERSISTENCE,
      AND MACROPHAGE SURVIVAL

34. The Spectrum of Drug Susceptibility in Mycobacteria  711
   Bree B. Aldridge, Iris Keren, and Sarah M. Fortune

35. The Sculpting of the Mycobacterium tuberculosis Genome by Host
    Cell-Derived Pressures  727
   David G. Russell, Wonsik Lee, Shumin Tan, Neelima Sukumar,
   Maria Podinovskaia, Ruth J. Fahey, and Brian C. VanderVen

36. Evasion of Innate and Adaptive Immunity by
    Mycobacterium tuberculosis  747
   Michael F. Goldberg, Neeraj K. Saini, and Steven A. Porcelli

37. Mycobacterial Biofilms  773
   Jacobs P. Richards and Anil K. Ojha

Preface

Fourteen years have passed since the first edition of Molecular Genetics of Mycobacteria was published in 2000, and the mycobacterial field has exploded in the intervening time. In 2000 the Mycobacterium tuberculosis genome sequence had recently been reported, and there was considerable optimism for the advances in tuberculosis genetics that this would stimulate. This Second Edition of Molecular Genetics of Mycobacteria offers insights into how these promises have been realized, as well as the substantial impact of the numerous new molecular tools developed over the past dozen years. The field of mycobacterial genetics has thus expanded dramatically, with investigations into new areas of mycobacterial growth, replication, metabolism, physiology, drug susceptibility, and virulence.

The size and scope of Molecular Genetics of Mycobacteria, Second Edition, reflect this rapidly expanding field. This new edition contains double the number of chapters in the first edition and includes many topics not discussed there. The book is divided into eight main sections that focus on genomics and genetic exchange, gene expression, the proteome, metabolism, drug resistance, cell wall biosynthesis, macromolecular biosynthesis, and growth and persistence. Each contains several chapters written by leading experts in the field and includes a genetic perspective on the various topics discussed. The field is growing so rapidly that there are undoubtedly some specific topics and areas—especially those developed over the past year—that we have not been able to include and will have to await another edition.

Although M. tuberculosis is now fully tractable to genetic manipulation, tuberculosis the disease advances with little abatement of its impact on human health. Better clinical management across the world has led to steadying of the numbers of new cases reported each year, tuberculosis mortality, and the total number of infected people. Nonetheless, most of the problems in tuberculosis control that existed in 2000 are still with us today. The only available vaccine is BCG, with its
dubious efficacy against adult pulmonary tuberculosis; drug resistance continues
to grow; antituberculosis drug regimens have barely changed; and diagnosis is
either slow or costly. The good news is that the advances in mycobacterial genet-
ics are beginning to be reflected in exciting recent developments. New diagnostic
approaches can determine rifampin resistance within a few hours, promising new
drugs are progressing through the pipeline and into the clinic, and a range of
newly developed vaccines are being evaluated. The fruits of 30 years of intensive
genetic investigations are finally beginning to emerge. But there remains much
to learn about the mycobacteria and their curious but deadly habits and habi-
tats. We anticipate that molecular genetic approaches will blunt the defenses of
humanity’s deadliest microbial enemies over the next dozen years. It is our hope
that this book inspires both newcomers to the field and veterans in tuberculosis
research alike to think about tuberculosis problems with fresh perspectives and
understanding.

We would like to thank Ellie Tupper of ASM Press for her tireless efforts; Greg
Payne, ASM Press, for his continual encouragement and advice; and our excep-
tionally gifted and dedicated authors who contributed so splendidly to this book.

Mycobacterium gastri, 581
Mycobacterium gilvum, 151
Mycobacterium gordone, 777
Mycobacterium haemophilum, 581
Mycobacterium kansasii
cell envelope composition of, 561, 572,
581, 586, 590
energetics of, 402
genomics of, 30, 33
phosphatidyl-mylo-inositol glycolipids of,
542
sigma factors of, 151
trehalose in, 368
Mycobacterium leprae
adenylate cyclases of, 284
BCG protection against, 50
cell envelope composition of, 560, 570,
581, 585–586, 591
drug targets of, 349
energetics of, 400
mycolic acids of, 618
noncoding RNAs of, 192, 199
nucl soils metabolism in, 636–637
pathogenicity of, 27
peptidoglycan of, 513, 517, 523–524, 526
phosphatidyl-mylo-inositol glycolipids of,
542, 545, 546
proteomics of, 273
Pup-proteasome system of, 668
regulatory systems in, 214
resistance in, 418, 467
safety in handling, 5–10
sigma factors of, 141, 151
STPKs of, 683
Mycobacterium lepraeum, 560, 587
Mycobacterium marinum
adenylate cyclases of, 284
in biofilms, 778
cell envelope composition of, 559, 571,
579–581
drug susceptibility in, 715
energetics of, 396, 402
mycolic acids of, 623
pathogenicity of, 27
peptide glycan of, 524
phage interactions with, 100
phosphatidyl-mylo-inositol glycolipids of,
542, 548
resistance in, 467
sigma factors of, 141, 151
trehalose in, 365, 368–369
Mycobacterium microti
cAMP signaling in, 290
cell envelope composition of, 581,
585, 586
genomics of, 31, 35, 37, 51
horizontal gene transfer in, 61
Mycobacterium mungi, 31, 37, 51
Mycobacterium oryisis, 31
Mycobacterium phlei, 571
Mycobacterium paratuberculosis
sigma factors of, 149–150
transposons of, 15
Mycobacterium pinnipedi
acellular composition of, 585
genomics of, 31
horizontal gene transfer in, 61
Mycobacterium protobacteriosis, 34, 72
Mycobacterium scrupulaceum, 99
Mycobacterium senegalense, 613
Mycobacterium smegmatis
adenylate cyclases of, 284
arabinogalactan of, 536, 538–541
in biofilms, 776–779
buffers of, 309, 313
cAMP signaling in, 285–287, 289–291
carbon metabolism in, 325–326, 333
cell envelope composition of, 559,
561–562, 566–567, 571–572,
577–579, 587, 589–590, 592
conjugation in, 63–64, 67, 71–72, 75–76
defenses against reactive species, 305
DNA replication in, 644
double-strand DNA break repair in, 658,
661–663
drug susceptibility in, 714–716
energetics of, 394–403
gene transfer to, 55
genetic switches in, 225–229, 231–232
genomics of, 58, 29, 33, 37
immune system evasion by, 751–752
metabolism of, 378
in Mycobacterium tuberculosis gene
transfer, 4–5, 11–17
mycolic acids of, 613, 615–616,
618–619, 623
noncoding RNAs of, 189, 192–193, 200
nucl soils metabolism in, 636–638, 640
peptide glycan of, 515, 517, 520–522,
524–527
phage interactions with, 81–82, 84, 95,
99–108
phage lysis and, 123–125, 127, 129–130
phosphatidyl-mylo-inositol glycolipids of,
543–550
Pup-proteasome system of, 668–669,
672–675
Index
Nitrogen compounds, see Reactive nitrogen species
NusA transcription factor, 186
Outer membrane
OtsA-OtsB pathway, 362–365
Orotate phosphoribosyltransferase, 638
Orme, I. M., 779
Organic cation transporter, 312
Optimus phage, 99
Open reading frames, in
Ontology, gene, 263–265
One-component signaling systems, 681
Obligate aerobe, Mycobacterium tuberculosis as, 302
OFF switches, 186, 189
Oftoxacin, 456–457, 462–463, 466, 467
O'Hare, H. M., 696
Ojha, A. K., 614, 715, 779–780
Ofloxacin, 456–457, 462–463, 466, 467
Orf2 protein, 513
NOD-like receptors, 747–750
Noncanonical translational start codons, 144–145
Noncoding RNAs, 183–207
Nuci gene and NudC protein, 438–439
nudC
Nucleotide excision repair, 663
Nucleoid-associated proteins, 174–175
Nuclear magnetic spectroscopy, in
NRP proteins, 399–400
genes and Nrd proteins, 641
nrd
NRAMP (natural-resistance-associated
Nod2 protein, 513–533
Nocardia farcinica
Nocardia, mycolic acids of, 613
Nocardia, mycolic acids of, 613
Nocardia, mycolic acids of, 613
Nocardia, mycolic acids of, 613
Nocardia, mycolic acids of, 613
Northern blot analysis, for RNA, 198–199
Norr proteins, 466, 714
Ojha, A. K., 614, 715, 779–780
Ofloxacin, 456–457, 462–463, 466, 467
Nonpromoter binding, in ChIP-Seq,
Non-replicating persistence, 395
Nonstructural genes, 94–95, 97
Norfloxacin, 467
Nor proteins, 466, 714
Overexpression libraries, 499
Oxy proteins, 198
Oxygen deficiency, see Hypoxia
P2 protein, 144
P3 protein, 144
P3 derivatives, 64–65
PA-824, 300, 487, 501
PacI restriction enzyme, 14
paf gene, 667, 671–674, 676
pAL5000 plasmid, 4, 13, 65
pap genes and Pap proteins, 233, 485, 487,
307, 670, 672
pap genes and Pap proteins, 212, 366–
368, 574
Par proteins, 457
Para-aminosalicylic acid
Oxidative stress, 192–193, 299–322
defense strategies for, 305–312
definition of, 300
detoxification for, 305–312
double-strand DNA breaks in, 657
in lung, 301–302
PZA activity and, 484, 485
response to, 140–141, 144, 147, 149,
151–152
Oxidative phosphorylation, energetics of, 299
Pep2 protein, 591–592
PeptideAtlas database, 249
Pep2 protein, 147, 213
Peptide(s)
cross-linking of, in peptidoglycan
synthesis, 520
from major histocompatibility complex,
759–762
for vaccines, 252–253
Pep2 protein, 147, 213
Peptide deformylase, 494
PeptideAtlas database, 249
Pep2 protein, 591–592
Pep2 protein, 147, 213
Pentraxin 2, 757
Periplasm, 350
Peroxidase/peroxynitrite reductase, 733
Peroxidasess, 304
Peroxiredoxin, 304
Peroxide/proliferator activated receptor
(PPAR), 418
Peroxynitrite reductase/peroxidoase
complex, 329
Persistence and persisters, 482
asymptomatic, 779
in biofilms, 775–776, 779
definition of, 712
drug tolerance and, 714–720
drug resistance and, 265–269
drug resistance and, 265–269
for, 376–384
in biofilms, 775–776, 779
definition of, 712
drug tolerance and, 714–720
drug resistance and, 265–269
for, 376–384
in biofilms, 775–776, 779
definition of, 712
drug tolerance and, 714–720
drug resistance and, 265–269
for, 376–384
PfR protein, 326
PgpA protein, 545, 562
pH
PfoR protein, 326
PgpA protein, 545, 562
pH
gene changes due to, 732
for growth, 390–391
PZA activity and, 483–484
response to, 212
PHE1 mutant, 5, 14, 15
pHE1 plasmid, 4
pHE159 plasmid, 28, 29
PHage, 83
PHage(s), 11, 15–17; see also
Mycobacteriophage(s)
in gene transfer, 33
