## CONTENTS

Editorial Board / xi  
Contributors / xiii  
Foreword: How It Began / xxiii  
Preface / xxv  
Author and Editor Conflicts of Interest / xxvii

### section A  
**GENERAL METHODS / 1**  
VOLUME EDITOR: ROBERT G. HAMILTON  
SECTION EDITOR: THOMAS A. FLEISHER  
1 Introduction / 3  
THOMAS A. FLEISHER  
2 Molecular Methods for Diagnosis of Genetic Diseases Involving the Immune System / 5  
AMY P. HSU  
3 The Human Microbiome and Clinical Immunology / 19  
FREDERIC D. BUSHMAN  
4 Protein Analysis in the Clinical Immunology Laboratory / 26  
ROSHINI SARAH ABRAHAM AND DAVID R. BARNIDGE

### section B  
**IMMUNOGLOBULIN METHODS =/ 47**  
VOLUME EDITOR: ROBERT G. HAMILTON  
SECTION EDITOR: DAVID F. KEREN  
5 Introduction / 49  
DAVID F. KEREN  
6 Immunoglobulin Genes / 51  
THOMAS J. KIPPS, EMANUELA M. GHIA, AND LAURA Z. RASSENTI  
7 Immunoglobulin Quantification and Viscosity Measurement / 65  
JEFFREY S. WARREN  
8 Clinical Indications and Applications of Serum and Urine Protein Electrophoresis / 74  
DAVID F. KEREN AND RICHARD L. HUMPHREY  
9 Immunochemical Characterization of Immunoglobulins in Serum, Urine, and Cerebrospinal Fluid / 89  
ELIZABETH SYKES AND YVONNE POSEY  
10 Cryoglobulins, Cryofibrinogenemia, and Pyroglobulins / 101  
PETER D. GOREVIC AND DENNIS GALANAKIS  
11 Strategy for Detecting and Follow Monoclonal Gammopathies / 112  
JERRY A. KATZMANN AND DAVID F. KEREN

### section C  
**COMPLEMENT / 125**  
VOLUME EDITOR: ROBERT G. HAMILTON  
SECTION EDITOR: PATRICIA C. GICLAS  
12 Introduction / 127  
PATRICIA C. GICLAS  
13 The Classical Pathway of Complement / 129  
PATRICIA C. GICLAS  
14 Analysis of Activity of Mannan-Binding Lectin, an Initiator of the Lectin Pathway of the Complement System / 133  
STEFFEN THIEL  
15 The Nature of the Diseases That Arise from Improper Regulation of the Alternative Pathway of Complement / 138  
RICHARD J. H. SMITH
section D

FLOW CYTOMETRY / 145

VOLUME EDITOR: JOHN L. SCHMITZ
SECTION EDITOR: MAURICE R. G. O'GORMAN

16 Introduction / 147
   MAURICE R. G. O'GORMAN

17 Polychromatic Flow Cytometry / 149
   ANGÉLIQUE BIANCOTTO AND J. PHILIP McCOY, JR.

18 High-Sensitivity Detection of Red and White Blood Cells in Paroxysmal Nocturnal Hemoglobinuria by Multiparameter Flow Cytometry / 168
   ANDREA ILLINGWORTH, MICHAEL KEENEY, AND D. ROBERT SUTHERLAND

19 Standardized Flow Cytometry Assays for Enumerating CD34+ Hematopoietic Stem Cells / 182
   D. ROBERT SUTHERLAND AND MICHAEL KEENEY

20 Functional Flow Cytometry-Based Assays of Myeloid and Lymphoid Functions for the Diagnostic Screening of Primary Immunodeficiency Diseases / 199
   MAURICE R. G. O'GORMAN

21 Acute Lymphoblastic Leukemia/Lymphoma: Diagnosis and Minimal Residual Disease Detection by Flow Cytometric Immunophenotyping / 207
   JOSEPH A. DiGIUSEPPE

22 Acute Myeloid Leukemia: Diagnosis and Minimal Residual Disease Detection by Flow Cytometry / 217
   BRENT WOOD AND LORI SOMA

23 Chronic Lymphocytic Leukemia, the Prototypic Chronic Leukemia for Flow Cytometric Analysis / 226
   HEBA DEGHEIDY, DALIA A. A. SALEM, CONSTANCE M. YUAN, AND MARYALICE STETLER-STEVENSON

24 Plasma Cell Disorders / 235
   JUAN FLORES-MONTERO, LUZALBA SANOJA, JOSÉ JUAN PÉREZ, FANNY POJERO, NOEMÍ PUIG, MARÍA BELÉN VIDRIALES, AND ALBERTO ORFAO

25 Future Cytometric Technologies and Applications / 251
   HOLDEN T. MAECKER

section E

FUNCTIONAL CELLULAR ASSAYS / 259

VOLUME EDITOR: BARBARA DETRICK
SECTION EDITOR: STEVEN D. DOUGLAS

26 Introduction / 261
   STEVEN D. DOUGLAS

27 Cryopreservation of Peripheral Blood Mononuclear Cells / 263
   ADRIANA WEINBERG

28 Lymphocyte Activation / 269
   ROSHINI SARAH ABRAHAM

29 Functional Assays for B Cells and Antibodies / 280
   MOON H. NAHM AND ROBERT L. BURTON

30 Methods for Detection of Antigen-Specific T Cells by Enzyme-Linked Immunospot Assay (ELISPOT) / 290
   BARBARA L. SHACKLETT AND DOUGLAS F. NIXON

31 Regulatory T Cell (Treg) Assays: Repertoire, Functions, and Clinical Importance of Human Treg / 296
   THERESA L. WHITESIDE

32 Measurement of NK Cell Phenotype and Activity in Humans / 300
   SAMUEL C. C. CHIANG AND YENAN T. BRYCESON

33 Functional Assays for the Diagnosis of Chronic Granulomatous Disease / 310
   DEBRA LONG PRIEL AND DOUGLAS B. KUHNS

section F

CYTOKINES AND CHEMOKINES / 321

VOLUME EDITOR: BARBARA DETRICK
SECTION EDITOR: JOHN J. HOOKS

34 Introduction / 323
   JOHN J. HOOKS

35 Multiplex Cytokine Assays / 324
   ELIZABETH R. DUFFY AND DANIEL G. REMICK

36 Cytokine Measurement by Flow Cytometry / 338
   HOLDEN T. MAECKER

37 Chemokine and Chemokine Receptor Analysis / 343
   SABINA A. ISLAM, BENJAMIN D. MEDOFF, AND
Contents

61 Human Herpesviruses 6, 7, and 8 / 578
RICHARD L. HODINKA

62 Parvovirus B19 / 591
STANLEY J. NAIDES

63 Respiratory Viruses / 598
DAVID J. SPEICHER, MOHSIN ALI, AND MAREK SMEJJA

64 Measles, Mumps, and Rubella Viruses / 610
DIANE S. LELAND AND RYAN F. RELICH

65 Viral Hepatitis / 620
HUBERT G. M. NIESTERS, ANNELIES RIEZEBOS-BRILMAN, AND CORETTA C. VAN LEER-BUTER

66 Viral Agents of Gastroenteritis / 639
GABRIEL I. PARRA AND KIM Y. GREEN

67 Arboviruses / 648
ROBERT S. LANCIOTTI AND JOHN T. ROEHRIG

68 Diagnosis of Hantavirus Infections / 658
WILLIAM MARCIEL DE SOUZA AND LUIZ TADEU MORAES FIGUEREIDO

69 Rabies Virus / 665
D. CRAIG HOOPER

70 Human T-Cell Lymphotropic Virus Types 1 and 2 / 674
BREANNA CARUSO, RAYA MASSOUD, AND STEVEN JACOBSON

71 Principles and Procedures of Human Immunodeficiency Virus Diagnosis / 696
KELLY A. CURTIS, JEFFREY A. JOHNSON, AND S. MICHELE OWEN

72 Neutropenia and Neutrophil Defects / 765
STEVEN M. HOLLAND

73 Neutropenia and Neutrophil Defects / 765
STEVEN M. HOLLAND

section L

ALLERGIC DISEASES / 781
VOLUME EDITOR: ROBERT G. HAMILTON
SECTION EDITOR: PAMELA A. GUERRERIO

80 Introduction / 783
PAMELA A. GUERRERIO

81 Quantitation and Standardization of Allergens / 784
RONALD L. RABIN, LYNNSEY RENN, AND JAY E. SLATER

82 Immunological Methods in the Diagnostic Allergy Clinical and Research Laboratory / 795
ROBERT G. HAMILTON

83 Assay Methods for Measurement of Mediators and Markers of Allergic Inflammation / 801
JOHN T. SCHROEDER, R. STOKES PEEBLES, JR., AND PAMELA A. GUERRERIO

84 Tests for Immunological Reactions to Foods / 815
CARAH B. SANTOS, DAVID M. FLEISCHER, AND ROBERT A. WOOD

85 Diagnosis of Rare Eosinophilic and Mast Cell Disorders / 825
CEM AKIN, CALMAN PRUSSIN, AND AMY D. KLION

section M

SYSTEMIC AUTOIMMUNE DISEASES / 839
VOLUME EDITOR: BARBARA DETRICK
SECTION EDITOR: WESTLEY H. REEVES

86 Introduction / 841
WESTLEY H. REEVES

87 Antinuclear Antibody Tests / 843
ALESSANDRA DELLAVALANCE, WILSON DE MELO CRUVINEL, PAULO LUIZ CARVALHO FRANCESCANTONIO, AND LUIS EDUARDO COELHO ANDRADE

88 Detection of Autoantibodies by Enzyme-Linked Immunosorbent Assay and Bead Assays / 859
EDWARD K. L. CHAN, RUFUS W. BURLINGAME, AND MARVIN J. FRITZLER

89 Immunodiagnosis and Laboratory Assessment of
SECTION EDITORS: ELAINE F. REED AND QIUHENG JENNIFER ZHANG

112 Histocompatibility and Immunogenetics Testing in the 21st Century / 1065
QIUHENG JENNIFER ZHANG AND ELAINE F. REED

113 Molecular Methods for Human Leukocyte Antigen Typing: Current Practices and Future Directions / 1069
MARK KUNKEL, JAMIE DUKE, DEBORAH FERRIOILA, CURT LIND, AND DIMITRI MONOS

114 Evaluation of the Humoral Response in Transplantation / 1091
PAUL SIKORSKI, RENATO VEGA, DONNA P. LUCAS, AND ANDREA A. ZACHARY

115 Non-Human Leukocyte Antigen Antibodies in Organ Transplantation / 1103
ANNETTE M. JACKSON AND BETHANY L. DALE

116 Evaluation of the Cellular Immune Response in Transplantation / 1108
DIANA METES, NANCY L. REINSMOEN, AND ADRIANA ZEEVI

117 Complement in Transplant Rejection / 1123
CARMELA D. TAN, E. RENE RODRIGUEZ, AND WILLIAM M. BALDWIN III

118 Molecular Characterization of Rejection in Solid Organ Transplantation / 1132
DARSHANA DADHANIA, TARA K. SIGDEL, THANGAMANI MUTHUKUMAR, CHOLI HARTONO, MINNIE M. SARWAL, AND MANIKKAM SUTHANTHIRAN

119 Killer Cell Immunoglobulin-Like Receptors in Clinical Transplantation / 1150
RAJA RAJALINGAM, SARAH COOLEY, AND JEROEN VAN BERGEN

120 Chimerism Testing / 1161
LEE ANN BAXTER-LOWE

SECTION Q

LABORATORY MANAGEMENT / 1169

VOLUME EDITOR: ROBERT G. HAMILTON
SECTION EDITOR: RONALD J. HARBECK

121 Clinical Immunology Laboratory Accreditation, Licensure, and Credentials / 1171
LINDA COOK AND RONALD J. HARBECK

122 Validation and Quality Control: General Principles and Application to the Clinical Immunology Laboratory / 1180
VIJAYA KNIGHT AND TERRI LEBO

Author Index / 1193
Subject Index / 1195
EDITORIAL BOARD

C. LYNNE BUREK (section N)
Johns Hopkins University, Department of Pathology, SOM, 720 Rutland Ave., Baltimore, MD 21205

PATRIZIO CATUREGLI (section N)
Johns Hopkins University, Department of Pathology, SOM, 720 Rutland Ave., Baltimore, MD 21205

DANIEL CHAN (section O)
Department of Pathology, Johns Hopkins University, SOM, Clinical Chemistry, CRB 11 3M 05, Baltimore, MD 21287

STEVEN D. DOUGLAS (section E)
The Children's Hospital of Philadelphia, University of Pennsylvania, Suite 1208 Abramson Research Building, 34th & Civic Center Blvd., Philadelphia, PA 19104

THOMAS A. FLEISHER (section A)
Department of Laboratory Medicine, Clinical Center, National Institutes of Health, Bldg. 10 Rm. 2C306, 10 Center Drive, Bethesda, MD 20814

PATRICIA C. GICLAS (section C)
National Jewish Health, Diagnostic Complement Laboratory, 1400 N. Jackson St., Denver, CO 80206

PAMELA A. GUERRERIO (section L)
Food Allergy Research Unit, Laboratory of Allergic Diseases, National Institute of Allergy and Infectious Diseases, 4 Memorial Dr., Building 4, Room 228B, MSC0430, Bethesda, MD 20892

RONALD J. HARBECK (section Q)
National Jewish Health, 1400 Jackson Street, Denver, CO 80206

RICHARD L. HODINKA (section J)
University of South Carolina School of Medicine Greenville and Greenville Health System, Room 210, Health Science Administration Building, 701 Grove Rd., Greenville, SC 2960

JOHN J. HOOKS (section F)
National Institutes of Health, Immunology & Virology Section, NEI, Bldg. 10 Rm. 10N248, 10 Center Dr, Bethesda, MD, 20814

DAVID F. KEREN (section B)
University of Michigan, 5228 Medical Science I, 1301 Catherine, Ann Arbor, MI 48109

HOWARD M. LEDERMAN (section K)
Pediatric Allergy & Immunology, Johns Hopkins Hospital - CMSC 1102, 600 N Wolfe St, Baltimore, MD 21287-3923

CHRISTINE M. LITWIN (section H)
Department of Pathology and Laboratory Medicine, Medical University of South Carolina, 171 Ashley Ave., Charleston, SC 29425

THOMAS B. NUTMAN (section I)
Department of Pathology and Laboratory Medicine, Medical University of South Carolina, 171 Ashley Ave., Charleston, SC 29425

MAURICE R. G. O’GORMAN (section D)
Keck School of Medicine, University of Southern California, and the Children’s Hospital of Los Angeles, Pathology and Pediatrics, 4650 Sunset Blvd #43, Los Angeles, CA 90027

ELAINE F. REED (section P)
UCLA, Pathology, Rehab 1520, 1000 Veteran Avenue, Immunogenetics Center, Los Angeles, CA 90095

WESLEY H. REEVES (section M)
University of Florida, Division of Rheumatology & Clinical Immunology, PO Box 100221, Gainesville, FL 32610-0221

R. NEAL SMITH (section G)
Massachusetts General Hospital, Pathology, 501B Warren Bldg., 14 Fruit St., Boston, MA 02114

LORI J. SOKOLL (section O)
Department of Pathology, The Johns Hopkins University School of Medicine, Baltimore, MD 21205

KATHLEEN E. SULLIVAN (section K)
University of Pennsylvania, Division of Allergy and Immunology, Children’s Hospital of Philadelphia, 3615 Civic Center Blvd., Philadelphia, PA 19104

QIUHENG JENNIFER ZHANG (section P)
UCLA Immunogenetics Center, Department Pathology & Laboratory Medicine, 15-20 Rehab, 1000 Veteran Ave., Los Angeles, CA 90024
Contributors

ROSHINI SARAH ABRAHAM
Mayo Clinic, Laboratory Medicine and Pathology, Hilton 210e, 200 1st St. SW, Rochester, MN 55905

MARIA E. AGUERO-ROSENFELD
NYU Langone Medical Center, Rm. H374A, 560 First Ave., New York, NY 10016

CEM AKIN

Acknowledgment of Previous Contributors

The Manual of Molecular and Clinical Laboratory Immunology is by its nature a continuously revised work which refines and extends the contributions of previous editions. Since its first edition in 1976, many eminent scientists have contributed to this important reference work. The American Society for Microbiology and its Publications Board gratefully acknowledge the contributions of all of these generous authors over the life of this Manual.
Foreword:
How It Began

In 1971, I was working at the University of Oxford’s Sir William Dunn School of Pathology in the laboratory of James Gowans, the investigator who first definitively showed that the lymphocyte was the source of specific adaptive immunity. I was busily cannulating the thoracic ducts of rats in order to harvest T lymphocytes when I was informed that a transatlantic telephone call was coming in. My first reaction was fear of bad news. Rather, it was a phone call from Earle Spaulding. I knew Earle as the chairman of microbiology at Temple and active in the Eastern Pennsylvania branch of the American Society for Microbiology (ASM). He explained that he was calling as a member of the editorial group of the Manual of Clinical Microbiology (MCM), at that time in its first edition. His particular concern was the chapter on immunology, which devoted 100 pages to various serologic tests for infectious organisms with no mention of noninfectious diseases. Earle felt strongly that the field of immunologic diagnosis was growing exponentially and deserved a separate, companion manual. The MCM editorial board agreed, providing I was willing to accept the position of Editor-in-Chief.

I was delighted to receive the invitation. I had recently chaired a “blue ribbon” committee of the American Association of Immunologists (AAI) on the future of clinical immunology. We concluded that there was no space for a new patient-centered clinical specialty, but great need for improved, expanded laboratory support. A comprehensive manual would serve as a great stimulus to the whole field of laboratory-based clinical immunology. I accepted the offer with two qualifications. First, I needed a co-editor, particularly someone well versed at a practical level in immunology related to infectious diseases. Second, I asked that such a manual be cosponsored by the AAI. Both qualifications were agreed to by the ASM Publications Board.

The person I had in mind as co-Editor-in-Chief was Herman Friedman. I knew Herman from contacts arising from our joint interest in allergy research. I knew he understood the practice of laboratory immunology and was one of the few immunologists who actually researched the immunology of infection. Herman readily agreed to partner with me on the Manual, and so began a close collaboration that continued for three subsequent editions of the Manual, ended only by his untimely death. The AAI also accepted an offer of collaboration and appointed a liaison committee to work with us.

We were off and running, but we had no idea of how to proceed. There had never been a manual describing the entire laboratory practice of immunology. Part of our mission was to include the many applications of immunology devoted to detection and analysis of a wide variety of diseases, not only those induced by microorganisms. Should we approach the subjects disease by disease or method by method? We finally decided to compromise by beginning the book with invited chapters on the common methods used in the immunology laboratory, then continuing with sections covering their application to the main categories of disease. We included a final section on laboratory administration and quality control.

Having developed particular sections, we then sought the most experienced and highly qualified individuals to serve as section editors. Because of the cross-cutting matrix arrangement, there was major concern that some topics would be dealt with twice or even three times. We therefore decided to organize a “stakeholders meeting,” at which all of the section editors met at ASM in Washington, DC, with proposed outlines of their sections. Going through each one systematically, we identified topics where overlap occurred and ensured that everything important was included once, but not more. We also made a fundamental decision that the book would be complete and free-standing. The methods would be described in sufficient detail that the laboratory worker could actually prepare the materials, perform the tests, and interpret the results without consulting other references. It should be understood that, at that time, most laboratory reagents

Downloaded from www.asmscience.org by
IP: 54.70.40.11
On: Sun, 08 Sep 2019 21:55:47
were prepared within the laboratory and were generally not available as commercial kits. This format required that we keep descriptions terse and the reference lists short.

When the first edition of the *Manual of Clinical Immunology* was published in 1976, we felt it warranted some type of celebration. Herman suggested that we should organize a meeting to mark the birth of the book and to bring together the leaders in clinical laboratory immunology, including our authors and section editors. Eventually, this led to the formation of the Association of Medical Laboratory Immunologists and the American Board of Medical Laboratory Immunology.

The *Manual* continues to be published at regular intervals to the present, as the editorial lineup has evolved. Barbara Detrick and Robert G. Hamilton joined me as Editors for the Sixth Edition, and Dr. Detrick has continued to lead the *Manual* for the Seventh and the present Eighth Edition. I hope the series will go on for many years. Although the *Manual’s* name has changed and the format is altered, the overall aim is still to improve the care of patients with infectious malignant inflammatory and immune-mediated disorders. With the ready availability of validated kits, the job of the clinical laboratory immunologist has shifted toward working with clinical colleagues on the significance and interpretation of laboratory tests.

I’m proud to have been involved in the genesis of this *Manual*. It would not have been possible without the continued support of ASM, the cooperation of AAI, the persistence of succeeding volume and section editors, the contributions of hundreds of practicing clinical laboratory immunologists, and the foresight of a few visionary microbiologists of the 1970 era who realized that immunology had become a discipline and specialty of its own. It never would have happened if Herman Friedman had not joined with me in accepting the challenge. I hope that he will long be remembered for his numerous contributions to immunology.

NOEL R. ROSE, MD, Ph.D.
For over 40 years, the Manual of Clinical Laboratory Immunology has been the leading reference source, both in the United States and abroad, to advance the field of laboratory immunology, to foster the best contemporary and most cutting-edge methodologies, and to translate basic immunologic principles into appropriate laboratory tests.

Since the publication of the 7th edition of this Manual, remarkable progress has been made in the field of immunology, and these notable advancements have been reflected in the clinical immunology arena as well. The scope of clinical immunology is exceptionally broad and encompasses nearly every medical specialty, including such areas as transplantation, rheumatology, oncology, infectious disease, allergy, hematology, and neurology, to name a few. Because of its strategic position in the hospital setting, it is critical that the clinical immunology laboratory should have a guide to follow with regard to accurate and appropriate laboratory procedures. As the field of clinical immunology continues to expand, we look to the laboratory director as a key person to gather the new basic information and integrate it into useful clinical procedures as well as to serve as a pivotal contact for communication with the various disciplines. In addition to keeping abreast with the most updated testing systems, the goal for this Manual is that it must not only serve the needs of today’s clinical immunology laboratory but also look to the future, where even more dramatic progress in diagnosis and treatment can be anticipated.

In an effort to capture the new dimensions in this field and to reflect the continuous evolution of clinical immunology, significant changes have been introduced into the 8th edition of the Manual of Molecular and Clinical Laboratory Immunology. Several sections of the Manual have been notably updated to reflect the latest laboratory approaches in molecular assays as well as the shift to automated testing, kit-based diagnostics, and new technical tools: themes that are carried throughout the book. New chapters have been introduced to highlight these changes. For example, section D, Flow Cytometry, describes the latest applications of these techniques, such as polychromatic flow cytometry and mass cytometry; section F reviews fresh information on the clinical applications of cytokines and chemokines; the infectious disease sections H, I, and J include the newest strategies used in infectious disease diagnosis and treatment, including the HIV and syphilis algorithms; section K, Immunodeficiency Diseases, presents the recent newborn screening programs for severe combined immune deficiency; and section P, Transplantation Immunology, outlines the usefulness of next-generation sequencing in the human leukocyte antigen (HLA) laboratory.

Once again, this Manual is offered not just in print but also electronically as either an EPUB file or a PDF. This special feature will allow a larger audience to review and use the Manual.

As we produce the 8th edition of this Manual, it is appropriate to celebrate its success. Noel Rose, the Manual’s first Editor-in-Chief, has provided a foreword reflecting on how the field has changed over the past 5 decades.

Since the publication of this Manual is a joint effort of many dedicated individuals, I wish to acknowledge the outstanding commitment and invaluable support of our volume editors, section editors, and chapter authors, all of whom, as internationally renowned experts in their areas, have contributed their extraordinary experience, energy, and time to the success of this edition. Also, I would like to extend my appreciation to the ASM editorial staff, in particular Ellie Tupper, Senior Production Editor, and Christine Charlip, Director, ASM Press, who have provided their valuable experience and support to complete this edition.

BARBARA DETRICK, Ph.D.
Editor in Chief
Cem Akin (coauthor on chapter 85) has consultancy agreements with Novartis and Patara Pharma and receives research funding from Dyax.

Barbara Detrick (Editor in Chief, coauthor on chapter 106) serves as a consultant to Siemens Healthcare Diagnostics, Inc., Abbott Laboratories, and INOVA Diagnostics, Inc.

Deborah Ferriola (coauthor on chapter 113) receives royalties from Omixon. Omixon has licensed the protocol we developed for HLA typing by NGS from the Children's Hospital of Philadelphia and makes it available as a commercial product named “Holotype HLA.” Omixon is mentioned in this chapter as a company that provides software analysis tools for the genotyping of HLAs using NGS data. It is not mentioned as a company that commercializes HLA typing products/kits, because at the time of writing Omixon had not developed this activity.

Marvin J. Fritzler (coauthor on chapter 88) has been a consultant to or received research gifts in kind from Inova Diagnostics Inc., Euroimmun GmbH, Mikrogen GmbH, Dr. Fsoke Laboratorien GmbH, ImmunoConcepts, GSK Canada, Amgen, Roche, and Pfizer. He is the Director of Mitogen Advanced Diagnostics Laboratory.

Andrea Illingworth (coauthor on chapter 18) has received unrestricted Educational Grant funding and speaker honoraria from Alexion Pharmaceuticals.

Michael Keeney (coauthor on chapters 18 and 19) is a consultant for Beckman Coulter, Canada, and Alexion Pharma, Canada. He has received unrestricted Educational Grant funding and speaker honoraria from Alexion Pharmaceuticals.

Masataka Kuwana (chapter 91) holds a patent on an antirNA polymerase III antibody measuring kit.

Curt Lind (coauthor on chapter 113) receives royalties from a licensing agreement between Omixon Biocomputing and the Children's Hospital of Philadelphia and is an employee of Thermo Fisher Scientific, Transplant Diagnostics.

Robert P. Lisak (coauthor on chapter 99) is on an advisory board for Syntimmune.

Dimitri Monos (coauthor on chapter 113) receives royalties from Omixon. Omixon has licensed the protocol we developed for HLA typing by NGS from the Children's Hospital of Philadelphia and makes it available as a commercial product named “Holotype HLA.” Omixon is mentioned in this chapter as a company that provides software analysis tools for the genotyping of HLAs using NGS data. It is not mentioned as a company that commercializes HLA typing products/kits, because at the time of writing Omixon had not developed this activity.

Stanley J. Naides (chapter 62) is a full-time employee of Quest Diagnostics Nichols Institute and receives a salary, stock, and stock options from Quest Diagnostics.

Timothy Niewold (coauthor on chapter 38) has received research grants from Janssen Inc. and EMD Serono Inc.

Maurice R. G. O’Gorman (chapter 20) is a BD Biosciences consultant and contractee.

Paul Sikorski (coauthor on chapter 114) is an employee of One Lambda, Inc., a Thermo Fisher Scientific brand.

Marek Smieja (coauthor on chapter 63) has done small studies with Copan and GenMark.

Melissa R. Snyder (chapter 103) participates on the Strategic Advisory Committee with INOVA Diagnostics.

Kathleen E. Sullivan (section editor) is a Baxter grant recipient and an Immune Deficiency Foundation consultant.

D. Robert Sutherland (coauthor on chapters 18 and 19) has received speaker fees and consulting fees from Alexion Pharmaceuticals.
Yi-Wei Tang (coauthor on chapter 57) has received research funds from Roche Molecular Diagnostics and the Luminex Corporation.

Brent Wood (coauthor on chapter 22) has received research funding and honoraria for Advisory Board participation from Seattle Genetics and Amgen and honoraria from Abbvie for Advisory Board participation.

Andrea A. Zachary (coauthor on chapter 114) is a consultant for BiologicTx and Genentech and is a Scientific Advisory Board member for Immucor.

Allergic diseases

Antibody assays
aspergillosis, 515
blastomycosis, 517
candidiasis, 518
in cryoglobulinemia, 105
Antibody avidity
human herpesvirus-6, 583
variable-cortex virus, 559–560
Antibody deficiencies, 737–746
absent B cells, 738
clinical manifestations, 737
common variable immune deficiency (CVID), 740
defect in immunoglobulin isotope switching, 739–740
evaluation of patients, 737–741
genetic analysis, 745–746
direct sequencing, 745
MPLA and aCGH, 745–746
IgA deficiency, 740–741
IgG subclass deficiency, 741
inheritance of, 739
laboratory investigation, 741–745
CD40L (CD154) expression for diagnosis of X-linked antibody deficiency (XLA), 743–745
diagnosis of X-linked lymphoproliferative syndrome 1 (XLPI), 743–745
diagnosis of X-linked lymphoproliferative syndrome 2 (XLPL2), 743–745
extended B-cell immunophenotyping, 742–743
flow cytometry, 741
next-generation sequencing, 746
phenotypes, 738
Antibody-dependent cellular cytotoxicity (ADCC), NK cell-mediated, 1156
Antibody detection
African trypanosomiasis, 489
amebiasis, 489
arboviruses, 648, 650–652
babesiosis, 490–491
cryptosporidiosis, 491–492
cyclosporiasis, 492
cysticercosis, 492–493
cytomegalo virus, 572–573
echinococcosis, 493
Epstein-Barr virus, 567–568
fascioliasis, 494
fungal infections, 504–505
giardiasis, 495
human herpesvirus-6, 581–582
leishmaniasis, 495
paragonimiasis, 496
parasitic infections, 486–488, 492
schistosomiasis, 496
strongyloidiasis, 496–497
toxocariasis, 497
toxoplasmosis, 497–498
trichinellosis, 498
Antibody-mediated rejection (AMR), 1123–1129
Antibody microarrays, 29
Antibody screens, in evaluation of humoral response to transplantation advantages and disadvantages of, 1093
assay characteristics, 1097
interpretation, 1097
overview, 1093
quality control, 1095–1096
Antibody-secreting memory B cells, 615
Antibody titration, with polychromatic flow cytometry, 159, 161
Anti-C5a peptide antibodies, 401
Anti-calpain 2 antibody, 899
Anticardiolipin assay, 907
Anticellular antibody, 843
Anticomplement antibody to cryoglobulinemia, 108–109
Anticomplement immunofluorescence assay (ACIF), for human herpesvirus-6, 582–583
Anticyclic citrullinated peptide, in rheumatoid arthritis, 347
Anti-cyclic citrullinated peptide antibody (ACPA), 897–902, 923
clinical significance, 899
combined ACPA and RF testing, 902
Anticytokine autoantibodies, 323, 365–370
detection, 365–368
enzyme-linked immunosorbent assay (ELISA), 365, 367–368
immunoblotting, 367–368
luciferase immunoprecipitation systems (LIPS), 367–368
Luminox, 367–368
protein array, 367–368
radioimmunoassays (RIA), 367–368
diseases associated with, 365–366
functional assays, 369
isotype and subclass analysis, 369
titer, 369
Anti-deaminated glutamic acid antibodies, 984–985
Anti-ΔNp63 antibody, 399–400
Anti-dsDNA antibodies, 868, 873–874
Antierythropoietin autoantibodies, 323
Anti-GM-CSF (murine citrullinated vimentin), 899
Antifilaggrin antibody, 898–899
Anti-Granulocyte-Macrophage colony stimulating factor autoantibodies and pulmonary alveolar proteinosis, 323
Anti-Granzyme B antibody, 401
Anti-human herpesvirus-6, 580–582
Anti IFN-γ antibody, 385–387
Anti-IFN-γ autoantibodies and opportunistic infection, 323
Anti-keratin antibody, 898–899
Anti-Ku antibody, 891
Anti-La (SS-B) antibodies, 964
Anti MCV (murine citrullinated vimentin), 899
Antimitochondrial autoantibodies, 966–969
Anti-M-protein test, 401
Anti-myelinated-associated glycoprotein, 961
Anti-NADase test, 401
Anti-neutrophil cytoplasmic antibodies (ANCA), 386, 909–914
in inflammatory bowel disease, 987–988
tests for, 909–911
vaculitides associated with, 909–914
Antinuclear antibodies, 868
in scleroderma/systemic sclerosis, 888–895
Antinuclear antibody tests, 843–857
IFN-ANA patterns, 849–857
decision-tree algorithm for classification, 856
disease associations, 854
interpretation of IFN-ANA test, 852–857
LE cell test, 843–844
methodological platforms, 843–845
automated readers for IFN-ANA assay, 844
enzyme-based HEp-2 cell ANA, 844
indirect immunofluorescence assay on HEp-2 cells, 843–845
solid-phase ANA, 844–854
negative test, meaning of, 852
positive test meaning of, 852–853
without clinical evidence of systemic autoimmunity, 853–855
quality control, 855, 859
reading IFN-ANA slides, 849–852
report of IFN-ANA test, 849, 852–857
strategy for ordering, 855
technical recommendations, 846–849
assay procedure, 846–849
cell substrate, 846
controls, 846
dark room, 849
first washing, 847
incubation with conjugate, 847–848
microscopy, 848–849
primary antibody incubation, 847
sample dilution, 846
samples, 846
second washing and coverslip mounting, 848
standard operating procedure, 846
workspace, 846
when to order, 852
Rosetta bacteria for production of large recombinant proteins, 861
use of natural autoantigens, 860
use of peptide antigens, 860
Anti-glucocerebrosidase antibody, 984–985
Anti-glomerular basement disease, 911
Anti-glomerular basement membrane antibodies, Western blot analysis of, 385–387
Antiglycolipid antibodies, 961–964
Anti-GMI ganglioside IgM antibodies, 961–962, 964
Antigen assay, 141
Antigen assays
influenza virus, 604
respiratory syncytial virus, 604
Antigen-binding site, 67
Antigen capture ELISA, for arboviruses, 652
Antigen detection
adenoviruses, 645
arboviruses, 652–653
aspergillosis, 515–516
candidiasis, 492–493
in cryoglobulinemia, 105
cryptosporidiosis, 491
cysticercosis, 493
cytomegalovirus, 572
fungal infections, 506
hepatitis C virus, 628–629
histoplasmosis, 523–526
human herpesvirus-6, 580–582
noroviruses, 642
parasitic infections, 488, 489, 490
rotaviruses, 640
saposin, 642
Antigen-driven proliferation, immunologic monitoring and, 1044
Antigen microarrays, 29–10
Antigen-presenting cells (APCs), 1028
alloreactive T lymphocytes, 1132
intracellular cytokine staining (ICS) assay, 338–339
T cell activation, 269
Antigens, for autoantibody detection, 860–861
production of recombinant proteins, 860–861
purification of autoantigens, 860
purification of recombinant proteins, 861
Biosafety, hantaviruses and, 658, 660–661
Birbeck granule, 1028
Birdshot chorioretinopathy, 998
Bisalbuminemia, 77

subject index

structures
- basic structure, 51
- heavy-chain isotypes, 51–52
- quantification and, 65–67
- titers against vaccine antigens, 281
- viscosity measurement, 71–72

Immunoglobulin class switch, 918–919

Immunoglobulin genes, 53–60

antibody diversity generation, 59

heavy-chain gene complexes, 53–54

light-chain gene complexes, 53–56

rearrangement, 56–60

- detection of, 60

- genetic basis for, 57–58

- heavy chain class switching, 58–59

- ontogeny expression and, 56–57

Immunoglobulin isotype switching, defect in,

739–740

Immunohistochemistry (IHC)

- antimitochondrial autoantibodies, 966–967
- currently available assays, 941
- functional assays, 944–946
- immune cells, 941

- immunologic therapies, monitoring, 1036–1048
- challenges, 1036–1037
- clinical trials with biologic agents, 1037–1038
- rationale for, 1038

- currently available assays, 1041

- functional assays, 1043–1046

- antigen-driven proliferation, 1044

- cytokine production and levels, 1045

- cytotoxicity assays, 1044–1045

- signaling pathways, 1045–1046

- suppressor cell functions, 1046–1047

- genomics, 1046

- phenotypic assays, 1040–1043

- epitope-specific T cells, 1042

- immune score and monitoring, 1043

- intracellular staining for flow cytometry, 1042

- measuring cell death, 1042

- multiparameter flow cytometry, 1042–1043

- neutrophil-to-lymphocyte ratio, 1041–1042

- percentages versus absolute numbers of immune cells, 1041

- selection of markers, 1040–1041

- subtyping of T cells, 1042

- proteomics, 1046

- quality control, 1046–1047

- rationale, 1038

- statistical data analysis, 1047

- strategy, 1038–1040

Immunoperoxidase assay (IPA)

- amebiasis, 489

- Orientia tsutsugamushi, 465

Immunophenotyping

- extended B-cell, 742–743

by flow cytometry

- acute lymphoblastic leukemia/lymphoma, 207–214
- acute myeloid leukemia (AML), 217–223

- B-cell chronic lymphoproliferative disorders, 227

- chronic lymphocytic leukemia (CLL), 226–232, 235–247

- cryopreserved peripheral blood mononuclear cells (PBMC), 265–266

- plasma cell disorders, 235–247

- T-cell chronic lymphoproliferative disorders, 228

Immunoprecipitation. See also

Radioimmunoprecipitation

- autoimmune myopathies

- analysis of proteins, 878–883

- analysis of small RNAs, 883–886

- in immunofixation electrophoresis, 89–90

- in immunosubtraction electrophoresis, 89, 91

- LIPS (luciferase immunoprecipitation system) assay for anti-RNP, 873

- pituitary antibodies, 947

- systemic lupus erythematosus (SLE), 870–873

- Immunopurification, for mass spectrometry, 41

- Immunoreceptor tyrosine-based activation motifs (ITAMs), 726

- ImmunoSORbent Allergen Chip (ISAC), 798

- Immunostaining of tissue, in IgG4-related disease, 919

- Immunosubtraction (ISUB) electrophoresis

- advantages and disadvantages, 92

- to avoid false-positive results, 86

- in clinical disorders, 92–95

- description, 91–92

- immunoprecipitation and, 89, 91

- monoclonal immunoglobulin increases, 93–94

- M protein detection, 76, 82–84, 86

- oligoclonal banding, 94–95

- polyclonal immunoglobulin increases, 92

- Immunosubtraction (ISUB/ISE) electrophoresis, 112, 120

- Immunoturbidimetric assays, for

- immunoglobulin measurement, 67–68

- in NAT Flu A/B assay, 605–606

- Indels (insertions/deletions), 7

- Indian tick typhus, 461

- Indirect fluorescent antibody (IFA)

- antineutrophil cytoplasmic antibodies (ANCAs), 909–911

- antirenal antibodies, 999–1001

- arboviruses, 651

- babesiosis, 490–491

- Bartonella, 475–476

- Borrelia burgdorferi, 422

- candidiasis, 518

- Costella, 466

- Epstein-Barr virus, 564

- hantaviruses, 660

- human herpesvirus-6, 582

- human herpesvirus-7, 586

- human herpesvirus-8, 587–588

- human immunodeficiency virus (HIV), 703

- leishmaniasis, 495

- malaria, 496

- measles viruses, 611–612

- monoclonal antibody-enhanced IFA (mIFA), 587–588

- mumps virus, 615

- Mycoplasma pneumoniae, 446

- Orientia tsutsugamushi, 465

- Pneumocystis jiroveci, 527

- Rocky Mountain spotted fever, 465

- rubella virus, 616–617

- toxoplasmosis, 497

- Trypanosoma cruzi, 491

- Indirect hemaggltination assay (IHA)

- Entamoeba histolytica, 489

- Trypanosoma cruzi, 491

- Indirect immunofluorescence

- gasric parietal cell antibodies, 932–933

- islet cell autoantibodies (ICA), 938–939

- liver kidney microsomal antibodies, 970–971

- pituitary antibodies, 947–949

- thyroglobulin antibodies, 930

- Indirect immunofluorescence antigenic antibody (IIF-ANA) assay, 843–857

- Inducible costimulating receptor (ICOS), 740

- Infectious mononucleosis, 563–564

- Inflammation, allergic, 783, 801–812

- assays for measurement of mediators/markers, 801–812

- airway challenges, 810–811

- basophil IL-4 and IL-13 secretion, 804–806

- basophil surface activation markers, 806–808

- dendritic cells, 807

- histamine, 801–803

- interferon alpha production, 807

- leukotriene C4, 803–804

- mast cell specific, 806–807

- prostaglandin D2, 807

- quality assurance of in vitro assays, 807–808

- skin testing, 808–810

- tryptase, 806–807

- Inflammatory bowel disease, 985–988

- clinical characteristics, 987

- diagnosis, 985, 987–988

- epidemiology, 987

- pathology, 986–987

- quality assurance for clinical testing, 988

- treatment with cytokine inhibitors, 357, 362

- Infliximab, 361

- Influenza-like illness, 600–601

- Influenza virus, 598–607

- antigen assays, 604

- antiviral susceptibility testing, 606

- avian influenza, 538

- biohazard, 603

- clinical significance, 600–602

- culture, 603, 606

- description of agents, 599

- direct fluorescent antibody (DFA), 603

- epidemiology, 600

- H1N1, 538, 601, 604–606

- H3N2, 601, 606

- H5N1, 538, 602

- H7N9, 538, 602

- immunochromatography, 603–605

- molecular tests, 605–606

- pathogenesis, 600

- rapid influenza diagnostic tests (RIDT), 538–539, 543, 545, 604–605

- taxonomy, 599

- transmission, 600

- vaccination, 601

- viremia, 602

- when to test, 602

- whom to test, 602

- InMAD (in vivo microbial antigen discovery), 479

VCF file, 8
Venereal Disease Research Laboratory (VDRL) assay, 413–416
Venezuelan equine encephalitis (VEE), 650, 652, 656
Verification, 1181
Verruca peruana, 475
Viability dyes, in polychromatic flow cytometry, 149–150, 158–160
Vimentin, 899, 1051, 1103
Viral infections, 537. See also specific viruses
ViroSeq HIV-1 genotyping system, 706–707
Viremic hepatitis virus, 624
Vitronectin, 138, 761
VDJ recombination, 8, 56–58
VN (vitronectin) deficiency, 761
VNTR (variable-number tandem repeat), 1161–1164
Voltage pulse, 152–153
VpreB protein, 57
VZV. See Varicella-zoster virus

Vasculitis

Vascular cellular adhesion molecule 1, as
Varicella-zoster virus, 556–560

Variation databases, 11

Variant Creutzfeldt-Jakob disease (vCJD), 911
Variable (V) region, immunoglobulin, 53, 66–67

Varianta, 564

Varicella-zoster virus, 556–560
antibody avidity, 559–560
cytopathic effect (CPE), 557
direct examination from skin lesions, 558
direct fluorescent antibody (DFA), 558
electron microscopy, 558
ELISA, 558–560
enzyme immunoassay (EIA), 559
fluorescent antibody to membrane antigen (FAMA assay), 558–559
genetic stability, 557
lateral flow assay, 558–559
latex agglutination, 558–559
neutralization assays, 559
overview, 556–557
PCR, 556–558
rapid diagnosis, 540
respiratory symptoms, 600
serologic testing, 558–560
specimen collection, 557
time-resolved fluorescence immunoassay (TRFIA), 559
VCF file, 8
Vchy virus, 624

Vascular cellular adhesion molecule 1, as biomarker of chronic myocardial injury, 977

Vasculitis

antineutrophil cytoplasmic antibodies (ANCA)-associated, 909–914
disease diagnosis, 909
neutrophil extracellular traps and, 914
tests for ANCA, 909–911
treatment, 913–914
types, 911–913
cryoablation and, 107
cryoglobulins and, 101–102, 104, 106, 911
nomenclature, 911
types
- anti-glomerular basement membrane (anti-GBM) antibodies, 385–388
- anti-phospholipase A2 receptor antibodies, 387–388
- antiretinal antibodies, 100
- Borrelia burgdorferi, 422–423, 425
- hantaviruses, 660–661
- human herpesvirus-6, 683
- human herpesvirus-7, 586
- human immunodeficiency virus (HIV), 703
- human T-cell lymphotropic virus, 676–677
- Mycoplasma pneumoniae, 445
- pityriatric antibodies, 947
- prion diseases, 686, 689
- Western equine encephalitis (WEE), 649–652, 654, 656
- Westgard, James O., 1188
- West Nile virus, 648–649, 652–656
- WHIM (warts, hypogammaglobulinemia, infections, and myelokathexis) syndrome, 765–767
- White blood cells, paroxysmal nocturnal hemoglobinuria (PNH), 168–180
- WHO. See World Health Organization
- Whole-exome sequencing, 1088
- Whole-genome sequencing, 1088
- Whole-lung antigen challenge, 581
- Whooping cough, 602
- Winter vomiting disease, 640
- WISH cells, 358
- Wiskott-Aldrich syndrome, 1178
- Wiskott-Aldrich syndrome, 1178
- WPSALM (World Association of Societies of Pathology and Laboratory Medicine), 1178
- Wells-Brookfield viscometer, 71
- Western blot
- anti-glomerular basement membrane (anti-GBM) antibodies, 385–388
- anti-phospholipase A2 receptor antibodies, 387–388
- antiretinal antibodies, 100
- Borrelia burgdorferi, 422–423, 425
- hantaviruses, 660–661
- human herpesvirus-6, 683
- human herpesvirus-7, 586
- human immunodeficiency virus (HIV), 703
- human T-cell lymphotropic virus, 676–677
- Mycoplasma pneumoniae, 445
- pityriatric antibodies, 947
- prion diseases, 686, 689
- Western equine encephalitis (WEE), 649–652, 654, 656
- Westgard, James O., 1188
- West Nile virus, 648–649, 652–656
- WHIM (warts, hypogammaglobulinemia, infections, and myelokathexis) syndrome, 765–767
- White blood cells, paroxysmal nocturnal hemoglobinuria (PNH), 168–180

Whole-genome sequencing, 1088
Whole-lung antigen challenge, 581
Whooping cough, 602
Winter vomiting disease, 640
WISH cells, 358
Wiskott-Aldrich syndrome, 281, 713, 723, 729, 795–796
Wolbachia, 461–462
Woodchuck hepatitis virus, 624
World Association of Societies of Pathology and Laboratory Medicine (WASPMAL), 1178
World Health Organization (WHO) classification of lymphoid neoplasmia, 1015–1017
laboratory quality assurance, 1178
Nomenclature Committee for Factors of the HLA System, 1072

Wuchereria bancrofti, 494

WU polyomavirus, 598, 600

X(C) chemokines, 343
Xenotyrella chotopis, 462
XAPI/BBRC4, 729, 775–776
X-linked chromosomal inactivation, 1018–1019
X-linked disorders
  agammaglobulinemia, 32–33
  anhidrotic ectodermal dysplasia with immunodeficiency, 723, 728
  antibody deficiency, 743–745
  hyper IgM syndrome, 201, 281, 726, 742–744
  lymphoproliferative disease, 724, 729, 775–776
  lymphoproliferative syndrome 1, 743–745
  lymphoproliferative syndrome 2, 743–745

X-linked inhibitor of apoptosis (XIAP), 724, 729, 731
Xpert Flu assay, 605
Xpert HIV-1 Qual, 702
Xpert HIV-1 viral load assay, 702
Xpert MTB/RIF assay, 433
xTAG Respiratory Virus Panel, 605–606

Yellow fever virus, 648–656

Zanamivir, 602
Zap-70 (zeta chain-associated protein kinase), 226–227, 229–232, 1024
ZAP-70 deficiency, 722, 727
Zinc transporter-8 (ZnT8) autoantibodies, 936–938, 941–942
Zombie stains, 149
Zone electrophoresis, 75–76
Zoonoses, hantaviruses as, 658
Zoster, 556. See also Varicella-zoster virus
