Contents

Contributors ix
Preface xvii

I. GENOMES, GENOMICS, AND GENETIC EXCHANGE

1. Gene Transfer in Mycobacterium tuberculosis: Shuttle Phasmids to Enlightenment 3
   William R. Jacobs, Jr.

2. Mycobacterial Pathogenomics and Evolution 27
   Daria Bottai, Timothy P. Stinear, Philip Supply, and Roland Brosch

3. BCG Vaccines 49
   Vanessa Tran, Jun Liu, and Marcel A. Behr

   Keith M. Derbyshire and Todd A. Gray

5. Molecular Genetics of Mycobacteriophages 81
   Graham F. Hatfull

6. Genetics of Phage Lysis 121
   Madalena Pimentel
II. GENE EXPRESSION AND REGULATION

7. Sigma Factors: Key Molecules in Mycobacterium tuberculosis Physiology and Virulence 137  
Riccardo Manganelli

8. Transcription Factor Binding Site Mapping Using ChIP-Seq  161  
SUMA JAINI, ANNA LYUBETSKAYA, ANTONIO GOMES, MATTHEW PETERSON, SANG TAE PARK, SAHADEVAN RAMAN, GARY SCHOOLNIK, AND JAMES GALAGAN

9. Noncoding RNA in Mycobacteria 183  
KRISTINE B. ARNVIG, TERESA CORTES, AND DOUGLAS B. YOUNG

10. Two-Component Regulatory Systems of Mycobacteria 209  
TANYA PARISH

11. Regulated Expression Systems for Mycobacteria and Their Applications 225  
DIRK SCHNAPPINGER AND SABINE EHRT

III. THE MYCOBACTERIAL PROTEOME

12. Mycobacterium tuberculosis in the Proteomics Era 241  
MARTIN GENGENBACHER, JEPPE MOURITSEN, OLGA T. SCHUBERT, RUEDI AEBERSOLD, AND STEFAN H. E. KAUFMANN

13. Structural Annotation of the Mycobacterium tuberculosis Proteome 261  
NAGASUMA CHANDRA, SANKARAN SANDHYA, AND PRAVEEN ANAND

14. Cyclic AMP Signaling in Mycobacteria 281  
GWENDOWLYN S. KNAPP AND KATHLEEN A. MCDONOUGH

IV. METABOLISM

15. The Physiology and Genetics of Oxidative Stress in Mycobacteria 299  
BRIDGETTE M. CUMMING, DIRK LAMPRECHT, RYAN M. WELLS, VIKRAM SAINI, JAMES H. MAZORODZE, AND ADRIE J. C. STEYN

16. Metabolomics of Central Carbon Metabolism in Mycobacterium tuberculosis 323  
ANTHONY D. BAGUHN AND KYU Y. RHEE

17. Mycobacterial Lipidomics 341  
EMILIE LAYRE, REEM AL-MUBARAK, JOHN T. BELISLE, AND D. BRANCH MOODY

18. Genetics of Mycobacterial Trehalose Metabolism 361  
RAINER KALSCHEUER AND HENDRIK KOLIWER-BRANDL
19. Metallobiology of Tuberculosis  377  
G. MARCELA RODRIGUEZ AND OLIVIER NEYROLLES

20. Energetics of Respiration and Oxidative Phosphorylation in Mycobacteria  389  
GREGORY M. COOK, KIEL HARDS, CATHERINE VILCHÈZE, TRAVIS HARTMAN, AND MICHAEL BERNEY

V. GENETICS OF DRUG RESISTANCE

KEIRA A. COHEN, WILLIAM R. BISHAI, AND ALEXANDER S. PYM

22. Resistance to Isoniazid and Ethionamide in *Mycobacterium tuberculosis*: Genes, Mutations, and Causalities  431  
CATHERINE VILCHÈZE AND WILLIAM R. JACOBS, JR.

23. The Molecular Genetics of Fluoroquinolone Resistance in *Mycobacterium tuberculosis*  455  
CLAUDINE MAYER AND HOWARD TAKIFF

24. Mechanisms of Pyrazinamide Action and Resistance  479  
YING ZHANG, WANLIANG SHI, WENHONG ZHANG, AND DENIS MITCHISON

25. Genetic Strategies for Identifying New Drug Targets  493  
ANDREJ TRAUNER, CHRISTOPHER M. SASSETTI, AND ERIC J. RUBIN

VI. GENETICS OF MEMBRANE AND CELL WALL BIOSYNTHESIS

26. Genetics of Peptidoglycan Biosynthesis  513  
MARTIN S. PAVELKA, JR., SEBABRATA MAHAPATRA, AND DEAN C. CRICK

27. Genetics of Mycobacterial Arabinogalactan and Lipoarabinomannan Assembly  535  
MONIKA JANKUTE, SHIPRA GROVER, HELEN L. BIRCH, AND GURDYAL S. BESRA

28. Genetics of Capsular Polysaccharides and Cell Envelope (Glyco)lipids  559  
MAMADOU DAFFÉ, DEAN C. CRICK, AND MARY JACKSON

29. The Molecular Genetics of Mycolic Acid Biosynthesis  611  
JAKUB Pawełczyk AND LAURENT KREMER
VII. GENETICS OF MACROMOLECULAR BIOSYNTHESIS

30. Nucleotide Metabolism and DNA Replication  635
   Digby F. Warner, Joanna C. Evans, and Valerie Mizrahi

31. Double-Strand DNA Break Repair in Mycobacteria  657
   Michael S. Glickman

32. The Pup-Proteasome System of Mycobacteria  667
   Nadine J. Bode and K. Heran Darwin

33. Mycobacterium tuberculosis Serine/Threonine
    Protein Kinases  681
    Sladjana Prisic and Robert N. Husson

VIII. THE MYCOBACTERIAL LIFESTYLE, PERSISTENCE,
      AND MACROPHAGE SURVIVAL

34. The Spectrum of Drug Susceptibility in Mycobacteria  711
    Bree B. Aldridge, Iris Keren, and Sarah M. Fortune

35. The Sculpting of the Mycobacterium tuberculosis Genome by Host
    Cell–Derived Pressures  727
    David G. Russell, Wonsik Lee, Shumin Tan, Neelima Sukumar,
    Maria Podinovskaia, Ruth J. Fahey, and Brian C. VanderVen

36. Evasion of Innate and Adaptive Immunity by
    Mycobacterium tuberculosis  747
    Michael F. Goldberg, Neeraj K. Saini, and Steven A. Porcelli

37. Mycobacterial Biofilms  773
    Jacobs P. Richards and Anil K. Ojha

Fourteen years have passed since the first edition of *Molecular Genetics of Mycobacteria* was published in 2000, and the mycobacterial field has exploded in the intervening time. In 2000 the *Mycobacterium tuberculosis* genome sequence had recently been reported, and there was considerable optimism for the advances in tuberculosis genetics that this would stimulate. This Second Edition of *Molecular Genetics of Mycobacteria* offers insights into how these promises have been realized, as well as the substantial impact of the numerous new molecular tools developed over the past dozen years. The field of mycobacterial genetics has thus expanded dramatically, with investigations into new areas of mycobacterial growth, replication, metabolism, physiology, drug susceptibility, and virulence.

The size and scope of *Molecular Genetics of Mycobacteria*, Second Edition, reflect this rapidly expanding field. This new edition contains double the number of chapters in the first edition and includes many topics not discussed there. The book is divided into eight main sections that focus on genomics and genetic exchange, gene expression, the proteome, metabolism, drug resistance, cell wall biosynthesis, macromolecular biosynthesis, and growth and persistence. Each contains several chapters written by leading experts in the field and includes a genetic perspective on the various topics discussed. The field is growing so rapidly that there are undoubtedly some specific topics and areas—especially those developed over the past year—that we have not been able to include and will have to await another edition.

Although *M. tuberculosis* is now fully tractable to genetic manipulation, tuberculosis the disease advances with little abatement of its impact on human health. Better clinical management across the world has led to steadying of the numbers of new cases reported each year, tuberculosis mortality, and the total number of infected people. Nonetheless, most of the problems in tuberculosis control that existed in 2000 are still with us today. The only available vaccine is BCG, with its

*Preface*
dubious efficacy against adult pulmonary tuberculosis; drug resistance continues to grow; antituberculosis drug regimens have barely changed; and diagnosis is either slow or costly. The good news is that the advances in mycobacterial genetics are beginning to be reflected in exciting recent developments. New diagnostic approaches can determine rifampin resistance within a few hours, promising new drugs are progressing through the pipeline and into the clinic, and a range of newly developed vaccines are being evaluated. The fruits of 30 years of intensive genetic investigations are finally beginning to emerge. But there remains much to learn about the mycobacteria and their curious but deadly habits and habitats. We anticipate that molecular genetic approaches will blunt the defenses of humanity’s deadliest microbial enemies over the next dozen years. It is our hope that this book inspires both newcomers to the field and veterans in tuberculosis research alike to think about tuberculosis problems with fresh perspectives and understanding.

We would like to thank Ellie Tupper of ASM Press for her tireless efforts; Greg Payne, ASM Press, for his continual encouragement and advice; and our exceptionally gifted and dedicated authors who contributed so splendidly to this book.
