6TH EDITION

DIAGNOSTIC MEDICAL PARASITOLOGY

LYNNE SHORE GARCIA, M.S., MT, CLS, F(AAM)
LSG & Associates, Santa Monica, California

Washington, DC
As with the first five editions, I dedicate this book to Marietta Voge, a truly rare individual who was widely recognized as one of the world’s leading parasitologists. During her years as a diagnostic and research parasitologist at the University of California, Los Angeles, she touched the lives of many students and staff in a very special way. She was always more than willing to share her expertise with all who asked and volunteered this help over the years whenever contacted. She was always willing to donate a considerable amount of her personal time as a volunteer for various medical projects throughout the world.

She was a very special individual to work with, always interested in the person as well as the problem at hand. Her areas of teaching extended far beyond science. Whatever subject she was interested in received her total enthusiasm and dedication, and she had an exceptional ability to deal with detailed work. Her sense of fairness and professional integrity were remarkable; these ideals were shared with all who came in contact with her.

Her contributions to the field of diagnostic parasitology were numerous and included many classes, seminars, papers, and textbooks. The importance of working with Dr. Voge is hard to put into words. She was unique in her ability to allow a student to grow, both scientifically and personally. She could guide without constraints, teach without formal lectures, counsel without being judgmental, challenge without being unrealistic, tease without being cruel, and always be supportive regardless of the situation. She expected much from her students and employees and yet always gave considerably more than she received.

Scientific information gained from our association with her was invaluable; however, her impact on our lives was considerably more than scientific. She was always available for consultations and just to talk. She left all of us with a sense of having personally matured as a result of knowing and working with her over the years. She is missed by all of us, and yet her contributions in terms of teaching, consultations, volunteer work, professionalism, and friendship will remain with us forever.

I would also like to dedicate the sixth edition of this book to the bench technologists, those of you who provide critical diagnostic information on a daily basis and contribute such valuable input for excellent patient care.
Academic training provides key information in the field, but those who perform routine work at the bench often contribute much more than simple diagnostic identifications. Congratulations and thanks to all of you.

Finally, I also dedicate this book to John Lawrence. He was an extraordinary individual, and without his original encouragement and assistance, the first edition of the book would never have been written.

PART I
Diagnostic Procedures 1

1 Philosophy and Approach to Diagnostic Parasitology 3

2 Collection, Preservation, and Shipment of Fecal Specimens 6
   Safety 6
   Fresh-specimen collection 7
      Collection of the specimen 7
      Number of specimens to be collected (standard recommendation) 7
      Number of specimens to be collected (pros and cons of various options) 8
   Collection times 9
   Specimen type, specimen stability, and need for preservation 9
   Preservation of specimens 12
      Preservatives 12
      Use of fixatives 20
   Shipment of diagnostic specimens, biological products, etiologic agents, or infectious substances 21

3 Macroscopic and Microscopic Examination of Fecal Specimens 26
   Macroscopic Examination 26
   Microscopic Examination (Ova and Parasite Examination) 27
      Direct wet smear 27
      Concentration (sedimentation and flotation) 32
      Permanent stained smear 41

Specialized Stains for Coccidia (Cryptosporidium, Cyclospora, and Cyclospora Species) and the Microsporidia 60
   Modified Kinyoun’s acid-fast stain (cold method) 60
   Modified Ziehl-Neelsen acid-fast stain (hot method) 63
   Carbol fuchsin negative stain for Cryptosporidium (from W. L. Current) 66
   Rapid safranin method for Cryptosporidium 66
   Rapid safranin method for Cyclospora, using a microwave oven 66
   Auramine O stain for coccidia (from Thomas Hänscheid) 67
   Modified trichrome stain for the microsporidia (Weber—green) 68
   Modified trichrome stain for the microsporidia (Ryan—blue) 70
   Modified trichrome stain for the microsporidia (Kokoskin—hot method) 72
   Acid-fast trichrome stain for Cryptosporidium and the microsporidia 72

4 Additional Techniques for Stool Examination 77
   Culture of larval-stage nematodes 77
   Harada-Mori filter paper strip culture 78
   Filter paper/slant culture technique (petri dish) 79
   Charcoal culture 80
   Baermann technique 81
   Agar plate culture for Strongyloides stercoralis 83
   Egg studies 87
      Estimation of worm burdens and Kato-Katz thick film 87
      Hatching of schistosome eggs 89
   Search for tapeworm scolex 91
   India ink injection procedure for tapeworm proglottids 92
   Qualitative test for fecal fat 94
   Quantitation of reducing substances (Clinitest) 95
5  Examination of Other Specimens from the Intestinal Tract and the Urogenital System  
Examination for pinworm  98  
Cellulose tape preparations  99  
Anal swabs  99  
Sigmoidoscopy material  100  
Direct saline mount  101  
Permanent stained slide  101  
Duodenal contents  102  
Duodenal drainage  102  
Duodenal capsule technique (Entero-Test)  103  
Urogenital specimens  103  
Trichomoniasis  103  
Filariasis  105  
Schistosomiasis  105  

6  Sputum, Aspirates, and Biopsy Material  107  
Expectorated sputum  107  
Induced sputum  109  
Aspirates  116  
Lungs and liver  116  
Lymph nodes, spleen, liver, bone marrow, spinal fluid, eyes, and nasopharynx  118  
Cutaneous ulcer  120  
Biopsy material  120  
Skin  124  
Lymph nodes  124  
Muscle  125  
Rectum and bladder  126  

7  Procedures for Detecting Blood Parasites  129  
Preparation of thick and thin blood films  129  
Thick blood films  130  
Thin blood films  131  
Combination thick and thin blood films (on the same slide)  132  
Combination thick and thin blood films (can be stained as either)  132  
Buffy coat blood films  134  
Staining blood films  135  
Giemsa stain  136  
Wright’s stain  137  
General notes on staining procedures  140  
Proper examination of thin and thick blood films  140  
Thin blood films  140  
Thick blood films  141  
Determination of parasitemia  141  
Diagnosis of malaria: review of alternatives to conventional microscopy  142  
QBC microhematocrit centrifugation method  145  
ParaSight F test  146  
NOW malaria test  147  
Flow anti-pLDH Plasmodium monoclonal antibodies  148  
Molecular testing  149  
Automated blood cell analyzers  150  
Diagnosis of leishmaniasis: review of alternatives to conventional microscopy  150  
ICT for detection of anti-rK-39 antibodies  150  
Concentration procedures  151  
Cyto centrifugation technique  151  
Knott concentration procedure  151  
Membrane filtration technique  151  
Gradient centrifugation technique  152  
Triple-centrifugation method for trypanosomes  152  
Special stain for microfilarial sheath  152  
Delafield’s hematoxylin  152  

8  Parasite Recovery: Culture Methods, Animal Inoculation, and Xenodiagnosis  156  
Culture methods  156  
Intestinal protozoa  157  
Pathogenic free-living amebae  162  
Blastocystis spp. (Blastocystis hominis)  167  
Pathogenic flagellates  168  
Flagellates of blood and tissue  172  
Toxoplasma gondii  176  
Plasmodium and Babesia spp.  177  
Cryptosporidium spp.  178  
Microsporidia  178  
Animal inoculation  178  
Leishmania spp.  180  
Trypanosoma spp.  180  
Toxoplasma gondii  180  
Xenodiagnosis  181  

9  Fixation and Special Preparation of Fecal Parasite Specimens and Arthropods  183  
Fixation of parasite specimens and arthropods  183  
Protozoa  185  
Solutions to induce relaxation in adult helminths  185  
Nematodes  186  
Trematodes  187  
Cestodes  187  
Helminth eggs and larvae  188  
Arthropods  188  
Mounting and staining of parasite specimens for examination  189  
Nematodes  189  
Trematodes  189  
Cestodes  191  
Mounting of arthropods for examination  191  
Mites  192  
Fleas and lice  192  
Ticks  193  
Miscellaneous arthropods  193
10  Artifacts That Can Be Confused with Parasitic Organisms 195
Protozoa  195
Amebae  195
Flagellates  198
Ciliates  198
Coccidia and microsporidia  198
Cryptosporidium spp. and Cyclospora cayetanensis  198
Cystoisospora belli  198
Microsporidia  199
Blood and body fluids  200
Malaria parasites and Babesia spp.  200
Leishmaniae and trypanosomes  200
Microfilariae  201
Body fluids: ciliated epithelial cells  202
Helminths  203
Adult worms and larvae  203
Eggs  204
Human cells  204
Polymorphonuclear leukocytes  205
Eosinophils  206
Macrophages  207
Lymphocytes  207
Red blood cells  207
Charcot-Leyden crystals  208
Nonhuman elements seen in feces (yeast cells)  209
Insect larvae  209
Spurious infections  209
Delusory parasitosis (delusional infestation)  210

11  Equipment, Supplies, Safety, and Quality System Recommendations for a Diagnostic Parasitology Laboratory: Factors Influencing Future Laboratory Practice 212
Equipment  212
Microscope  212
Centrifuge  216
Fume hood  217
Biological safety cabinet  217
Refrigerator-freezer  218
Supplies  218
Glassware  218
Miscellaneous supplies  218
ATCC quality control organisms  219
Safety: personnel and physical facilities  219
General precautions  219
Handwashing  220
Personal protective equipment
(OSH 2001 blood borne)  221
Handling specimens  221
Processing specimens  221
Spills  222
Disposal of contaminated materials  224
Standard precautions  224
Hepatitis exposure protocol  227
Dangerous properties of industrial materials  227
Current OSHA regulations for the use of formaldehyde  228
Latex allergy  229
Quality systems  229
Extent of services  229
Proficiency testing  230
In-house quality control  233
Patient outcome measures  236
Continuous quality improvement, total quality management, or 10-step and FOCUS-PDCA for performance improvement activities  237
CLIA ’88 inspection process  238
New quality guidelines  239
ISO guidelines  240
CLSI (NCCLS) model  240
Factors influencing future laboratory practice  241
Managed care  241
Financial considerations  242
Current regulations  242
Decentralized testing  243
Laboratory services  244
Technological trends  244
Clinical decision support  245
Personnel issues  245
Changing demographics  245
Emerging diseases  246
Bioterrorism  246

12  Medical Parasitology: Case Histories 249
Protozoal infections  249
Case 1  249
Case 2  251
Case 3  252
Case 4  255
Case 5  256
Case 6  258
Case 7  260
Helminth infections  262
Case 8  262
Case 9  263
Case 10  266
Case 11  267
Case 12  269
Case 13  271
Case 14  273
Blood parasite infections  274
Case 15  274
Case 16  278
Case 17  280
PART II
Clinically Important Human Parasites 297

13 Intestinal Nematodes 299
  Ascaris lumbricoides 300
  Enterobius vermicularis 308
  Trichuris trichiura 311
  Capillaria philippinensis 314
  Hookworms (Ancylostoma duodenale, Necator americanus, and Ancylostoma ceylanicum) 316
  Trichostrongylus spp. 321
  Strongyloides spp. 322

14 Tissue Nematodes 336
  Trichinella spp. 336
  Baylisascaris procyonis 346
  Lagochilascaris minor 352
  Toxocara canis and T. cati (visceral larva migrans and ocular larva migrans) 353
  Ancylostoma braziliense and A. caninum (cutaneous larva migrans) 358
  Human eosinophilic enteritis 359
  Dracunculus medinensis 360
  Angiostrongylus (Parastrongylus) cantonensis (cerebral angiostrongyliasis) 362
  Angiostrongylus (Parastrongylus) costaricensis (abdominal angiostrongyliasis) 365
  Gnathostoma spinigerum 366
  Gnathostoma doloresi, G. nipponicum, G. hispidum, and G. binucleatum 368
  Anisakis simplex, A. physetis, Pseudoterranova decipiens, Contracaecum osculatum, Hysterohlylax aduncum, and Porrocaecum reticulatum (larval nematodes acquired from saltwater fish) 370
  Capillaria hepatica 373
  Thelazia spp. 373

15 Filarial Nematodes 377
  Basic Life Cycle 380
  The Endosymbiont 380
  Human Pathogens 380
    Wuchereria bancrofti 381
    Brugia malayi 391
    Brugia timori 392
    Zoonotic Brugia infections (American brugian filariasis) 393
    Tropical pulmonary eosinophilia 394
    Loa loa 394
    Mansonella ozzardi 397
    Mansonella perstans 398
    Mansonella streptocerca 399
    Onchocerca volvulus 400
    Dirofilaria Dirofilaria and Dirofilaria Nochtiella spp. 409

16 Intestinal Cestodes 418
  Diphyllolothrium latum 418
  Taenia solium 425
  Taenia saginata 435
  Taenia asiatica (Asian Taenia or Taenia saginata asiatica) 437
  Hymenolepis (Rodentolepis) nana 439
  Hymenolepis diminuta 441
  Dipylidium caninum 443

17 Tissue Cestodes: Larval Forms 447
  Echinococcus granulosus (cystic hydatid disease) 447
  Echinococcus multilocularis (alveolar disease, hydatid disease) 458
  Echinococcus vogeli (Polycystic Hydatid Disease) and Echinococcus oligarthrus (Uncystic Hydatid Disease): Neotropical Echinococcosis 463
  Taenia (Multiceps) spp. (Taenia multiceps, Taenia serialis) (coenurosis) 465
  Spirometra mansonioides and Diphyllolothrium spp. (sparganosis) 467

18 Intestinal Trematodes 474
  Fasciolopsis buski 475
  Echinostoma ilocanum 479
  Heterophyes heterophyes 481
  Metagonimus yokogawai 482
  Gastrodiscoides bominis 484

19 Liver and Lung Trematodes 487
  Liver Flukes 487
    Clonorchis sinensis 487
    Opisthorchis viverrini 494
    Opisthorchis felineus 497
    Fasciola hepatica 499
    Fasciola gigantica 502
    Less Common Liver Flukes 504
      Dicrocoelium dendriticum, Dicrocoelium hospes, and Eurytrema pancreaticum 504
    Lung Flukes 506
      Paragonimus westermani 506
      Paragonimus kellicotti 512

20 Blood Trematodes: Schistosomes 516
  Schistosoma mansoni 517
  Schistosoma japonicum 530
  Schistosoma mekongi 536
### Schistosoma malayensis 539
### Schistosoma haematobium 539
### Schistosoma intercalatum 546

#### 21 Intestinal Protozoa: Amoebae 552

- *Entamoeba histolytica* 552
- *Entamoeba dispar* 567
- *Entamoeba moshkovskii* 568
- *Entamoeba bangladeshi* 569
- *Entamoeba hartmanni* 570
- *Entamoeba coli* 571
- *Entamoeba polecki* 572
- *Entamoeba gingivalis* 572
- *Endolimax nana* 574
- *Iodamoeba bütschlii* 575
- *Blastocystis* spp. 576

#### 22 Intestinal Protozoa: Flagellates and Ciliates 584

- *Giardia lamblia* (*G. duodenalis, G. intestinalis*) 584
- *Dientamoeba fragilis* 598
- *Pentatrichomonas hominis* (*Trichomonas hominis*) 602
- *Trichomonas tenax* 603
- *Chilomastix mesnili* 604
- *Enteromonas hominis* 604
- *Retortamonas intestinalis* 605
- *Balantidium coli* 605

#### 23 Intestinal Protozoa (Coccidia), Microsporidia, and Algae 612

- *Coccidia* 612
  - *Cryptosporidium* spp. 612
  - *Cyclospora* cayetanensis 630
  - *Cystoisospora* (*Isospora*) bellii 637
  - *Sarcocystis* spp. 643
- *Microsporidia* 648
- *Algae* (*Prototheca*) 662

#### 24 Free-Living Amoebae 667

- *Naegleria fowleri* 669
- *Acanthamoeba* spp. 677
- *Balamuthia mandrillaris* 687
- *Sappinia* (*diplodidea*) pedata 690

#### 25 Protozoa from Other Body Sites 694

- *Trichomonas vaginalis* 694
- *Toxoplasma gondii* 704

#### 26 Malaria and Babesiosis 719

- *Malaria* 719
- *Babesiosis* 763

#### 27 Leishmaniasis 778

- *Cutaneous Leishmaniasis*: General Comments 779
- *Old World (Eastern) Leishmaniasis*: Cutaneous Leishmaniasis 780
- *New World (Western) Leishmaniasis*: Cutaneous Leishmaniasis 788
- *Visceral Leishmaniasis*: General Comments 796
- *Old World (Eastern) Leishmaniasis*: Visceral Leishmaniasis 796
- *New World (Western) Leishmaniasis*: Visceral Leishmaniasis 803

#### 28 Trypanosomiasis 810

- *African trypanosomiasis* 811
  - *Trypanosoma brucei gambiense* 811
  - *Trypanosoma brucei rhodesiense* 822
- *American trypanosomiasis* 826
  - *Trypanosoma cruzi* 826
  - *Trypanosoma rangeli* 839

#### 29 Unusual Parasitic Infections 845

- *Aquatic protist* 845
  - *Rhinosporidium seeberi* 845
- *Protozoa* 848
  - *Lophomonas blattarum* 848
  - *Dictyostelium polycephalum* 850
  - *Mymoxoan parasites* 850
  - *Trypanosoma evansi, Trypanosoma lewisi* 851
- *Nematodes* (the roundworms) 852
  - *Ancylostoma ceylanicum* 852
  - *Halicephalobus gingivalis* 853
  - *Oesophagostomum* spp. 853
  - *Eustrongyloides* spp. 855
  - *Mermis nigrescens* 856
  - *Diocotophyma renale* 856
  - *Ternidens deminutus* 858
  - *Mammomonogamus laryngeus* (Syngamus laryngeus) 859
  - *Ascaris suum* 860
  - *Gongylonema pulchrum* 861
  - *Haycocknema perplexum* 861
- *Cestodes* 862
  - *Diplogonoporus* spp. 862
  - *Bertiella studeri* 862
  - *Inermicapsifer madagascariensis* 863
  - *Raillietina celebensis* 863
  - *Mesocestoides* spp. 864
  - *Taenia ciasciceps* 865
- *Trematodes* 866
  - *Alaria americana* 866
  - *Plagiorchis* spp. 868
  - *Neodiplostomum seoulense* 868
  - *Spelotrema brevicava* 869
  - *Brachylaima* sp. 869
  - *Nanophyetus* (*Troglotrema*) salmincola 870
  - *Stellantchasmus falcatus* 871
  - *Phaneropsolus spinicirrus, Phaneropsis bonnei*, and *Prosthodendrium molenkempi* 871
Contents

Haplorchis taichui 872
Gymnophysaloides seoi 872
Metrochis conjunctus (North American liver fluke) 873
Schistosoma mattheei 874
Philophthalmus lacrimosus 875
Achillearbainia spp. 875
Pentastomids 875
Armillifer spp., Linguatula serrata, and Sebekia spp. 875
Acanthocephalans 876
Macracanthorhynchus hirudinaceus and Moniliformis moniliformis 876

30 Parasitic Infections in the Compromised Host 883
Entamoeba histolytica 885
Free-living amebae 895
Blastocystis spp. 903
Giardia lamblia 903
Toxoplasma gondii 905
Cryptosporidium spp. 907
Cyclospora cayetanensis 910
Cystoisospora (Isospora) belli 912
Sarcocystis spp. 913
Microsporidia 914
Leishmania spp. 918
Strongyloides stercoralis 923
Plasmodium spp. 926
Babesia spp. 927
American trypanosomiasis 929
Crusted scabies 930

31 Health Care-Associated and Laboratory-Acquired Infections 935
Health Care-Associated (Nosocomial) infections 935
Gastrointestinal infections 936
Cryptosporidium spp. 936
Giardia lamblia 939
Entamoeba histolytica 940
Microsporidia 941
Cystoisospora (Isospora) belli 941
Hymenolepis nana 942
Taenia solium 942
Blood and tissue infections 942
Plasmodium spp. 942
Babesia spp. 943
Trypanosoma brucei gambiense and T. brucei rhodesiense 943
Trypanosoma cruzi 943
Leishmania donovani 944
Toxoplasma gondii 944
Infections with ectoparasites 945
Pediculus spp. and Phthirus pubis 945
Sarcoptes scabiei 945
Myiasis 945
Infections in the pediatric patient 946
Cryptosporidium spp. 946
Giardia lamblia 946
Pediculus humanus capitis 946
Sarcoptes scabiei 946
Infections in the compromised patient 946
Intestinal protozoa 948
Free-living amebae 948
Plasmodium spp. 948
Trypanosoma brucei gambiense and T. brucei rhodesiense 948
Trypanosoma cruzi 950
Leishmania spp. 950
Toxoplasma gondii 951
Specimen handling 951
Summary 951

32 Immunology of Parasitic Infections 954
Amebiasis 960
Giardiasis 964
Toxoplasmosis 966
African trypanosomiasis 968
American trypanosomiasis 970
Malaria 973
Helminth infections 978
Summary 981

33 Antibody and Antigen Detection in Parasitic Infections 986
Protozoal infections 993
Amebiasis 993
Babesiosis 995
Chagas’ disease 996
Cryptosporidiosis 997
Cyclosporiasis 997
Giardiasis 997
Leishmaniasis 998
Malaria 999
Toxoplasmosis 1001
Trichomoniasis 1004
Helminth infections 1004
Cysticercosis 1004
Hydatid disease 1005
Fascioliasis 1007
Filariasis 1007
Paragonimiasis 1009
Schistosomiasis 1010
Strongyloidiasis 1011
Toxocariasis 1012
Trichinosis 1013
Intradermal tests 1014
Casoni test 1014
Montenegro test 1014
34 Histologic Identification of Parasites 1019
Protozoa 1020
Amebae 1020
Flagellates 1024
Ciliates 1024
Coccidia 1025
Microsporidia 1027
Helminths 1029
Nematodes 1029
Cestodes 1039
Trematodes 1045
Blood Parasites 1052
Malaria 1052
Leishmania 1053
Trypanosomes 1055
Filaria 1056
35 Medically Important Arthropods 1077
Arthropods and their relationship to disease 1077
Bites and envenomation 1078
Tissue invasion 1081
Entomophobia and delusional infestation (parasitosis) 1082
Class Insecta (insects) 1083
Order Diptera (flies, mosquitoes, and midges) 1083
Myiasis 1090
Order Hemiptera (true bugs) 1098
Order Coleoptera (beetles) 1100
Order Siphonaptera (Fleas) (Ctenocephalides spp., Xenopsylla cheopis, Pulex irritans [Human Flea], Tunga penetrans, Nosopsyllus fasciatus, Echidnophaga gallinacea, and “Sand Fleas”) 1102
Order Anoplura (sucking lice) 1104
Order Mallophaga (biting and chewing lice) 1106
Order Hymenoptera (bees, wasps, and ants) 1106
Order Blattaria (cockroaches) 1108
Class Arachnida (ticks, mites, spiders, and scorpions) 1109
Subclass Acari (ticks, mites, and chiggers) 1109
Subclass Araneae (spiders) 1118
Subclass Scorpiones (scorpions) 1122
Other arthropods 1122
Class Chilopoda (centipedes) 1122
Class Diplopoda (millipedes) 1123
Class Crustacea (copepods, crabs, crayfish, etc.) 1123
Control of arthropods of medical importance 1123
Physical control 1124
Biological control 1124
Chemical control 1124
36 Treatment of Parasitic Infections 1134
Albendazole (Albenza) (Amedra) 1134
Amphotericin B (AmBisome) (Gilead) 1135
Contents

Thiabendazole (Mintezol) (Merck) 1170
Tinidazole (Tindamax) (Mission Pharmaceuticals) 1171
Triclabendazole (Egaten) (Novartis) 1172

APPENDIXES 1175

APPENDIX 1  Information Tables 1176
A1.1 Classification of human parasites 1176
A1.2 Distribution of selected parasitic infections in the Americas 1179
A1.3 Distribution of selected parasitic infections in Europe 1179
A1.4 Distribution of selected parasitic infections in Africa 1180
A1.5 Distribution of selected parasitic infections in Asia 1180
A1.6 Distribution of selected parasitic infections in Oceania 1181
A1.7 Cosmopolitan distribution of common parasitic infections (North America, Mexico, Central America, South America, Europe, Africa, Asia, and Oceania) 1181
A1.8 Body sites and specimen collection 1182
A1.9 Body sites and possible parasites recovered (trophozoites, cysts, oocytes, spores, adults, larvae, eggs, amastigotes, and trypomastigotes) 1183
A1.10 Body site, specimen and procedures, recommended methods, relevant parasites, and comments 1184
A1.11 Examination of tissue and body fluids 1189
A1.12 Key characteristics of protozoa of the intestinal tract and urogenital system 1191
A1.13 Key characteristics of tissue protozoa 1194
A1.14 Key characteristics of helminths 1196
A1.15 Key characteristics of most common parasites found in blood 1198
A1.16 Diagnostic laboratory report information that should be relayed to the physician 1200
A1.17 Pros and cons of stool specimen collection and testing options 1201
A1.18 Approaches to stool parasitology: test ordering 1203
A1.19 Pros and cons of ova and parasite examination options 1204
A1.20 Laboratory test reports: optional comments 1206
A1.21 Estimated prevalence of parasitic diseases worldwide 1207

APPENDIX 2  Flowcharts and Staining Tables for Diagnostic Procedures 1208

Flowcharts
A2.1 Procedure for processing fresh stool for the ova and parasite examination 1208
A2.2 Procedure for processing liquid specimens for the ova and parasite examination 1209
A2.3 Procedure for processing preserved stool for the ova and parasite examination by using the traditional two-vial collection kit 1210
A2.4 Procedure for processing sodium acetate-acetic acid-formalin (SAF)-preserved stool for the ova and parasite examination 1211
A2.5 Use of various fixatives and their recommended stains: fecal specimens preserved using polyvinyl alcohol (PVA) 1212
A2.6 Use of various fixatives and their recommended stains: fecal specimens preserved in the Universal Fixative, TOTAL-FIX 1213

Tables
A2.1 Steps in the trichrome staining procedure (mercuric chloride-based PVA-preserved stool specimens) 1214
A2.2 Steps in the trichrome staining procedure (non-mercuric chloride-based PVA-preserved stool specimens) 1215
A2.3 Steps in the iron hematoxylin staining procedure (mercuric chloride-based PVA-preserved stool specimens) (Spencer-Monroe method) 1216
A2.4 Steps in the iron hematoxylin staining procedure (mercuric chloride-based PVA-preserved stool specimens) (Tompkins-Miller method) 1217
A2.5 Steps in the iron hematoxylin staining procedure (incorporating the carbol fuchsin step) 1218
A2.6 Steps in the trichrome staining procedure (Universal Fixative [no mercury, no formalin, no PVA]) 1219
A2.7 Oil-mounted permanent stained smears (no Permount is used) 1220
A2.8 Tips on stool processing and staining 1221

APPENDIX 3  Common Problems in Parasite Identification 1222

Figures
A3.1–A3.25 Paired drawings of “look alikes” 1222
A3.26 Relative sizes of helminth eggs 1233

Tables
A3.1 Entamoeba spp. trophozoites versus macrophages 1223
A3.2 Entamoeba spp. cysts versus polymorphonuclear leukocytes (PMNs) 1224
A3.3 Entamoeba bistolyctica versus Entamoeba coli precysts and cysts 1226
A3.4 Endolimax nana versus Dientamoeba fragilis 1227
A3.5 Adult nematodes and/or larvae found in stool specimens: size comparisons 1234

APPENDIX 4  Quality Control Recording Sheets 1235

A4.1 Diagnostic parasitology quality control (QC) (reagents) 1236
A4.2 Diagnostic parasitology quality control (QC) (reagents)—example for multiple reagents 1237
A4.3 Diagnostic parasitology quality control (QC) (culture)—example of a worksheet 1238
A4.4 Equipment maintenance 1239

APPENDIX 5 Commercial Supplies and Suppliers 1241
Tables
A5.1 Sources of commercial reagents and supplies 1242
A5.2 Addresses of suppliers listed in Table A5.1 1245
A5.3 Sources of available reagents for immunodetection of parasitic organisms or antigens 1246
A5.4 Addresses of suppliers listed in Table A5.3 1248
A5.5 Commercial suppliers of diagnostic parasitology products 1249
A5.6 Sources of additional teaching materials, including case histories 1252

A5.7 Sources of parasitologic specimens 1253
APPENDIX 6 Reference Sources 1254
APPENDIX 7 “Late-Breaking” Published Information 1257
APPENDIX 8 Molecular Panels for Parasitology 1278
APPENDIX 9 FAQs 1284
GLOSSARY 1307
Index 1321
During the past few years, the field of diagnostic medical parasitology has seen dramatic changes, including newly recognized parasites, emerging pathogens in new geographic areas, bioterrorism considerations and requirements, alternative techniques required by new regulatory requirements, reevaluation of diagnostic test options and ordering algorithms, continuing changes in the laboratory test menus, implementation of testing based on molecular techniques, reporting formats and report comments, coding and billing requirements, managed-care relevancy, increased need for consultation and educational initiatives for clients, and an overall increased awareness of parasitic infections from a worldwide perspective. We have seen organisms like the microsporidia change from the status of “unusual parasitic infection” to being widely recognized as among the most important infections in both immunocompetent and compromised patients. With confirmation of the fifth human malaria, *Plasmodium knowlesi*, this field has expanded dramatically. More sensitive diagnostic methods for organism detection in stool specimens are now commercially available for *Entamoeba histolytica*, *Entamoeba histolytica*/*E. dispar*, *Giardia lamblia*, Cryptosporidium spp., and *Trichomonas vaginalis*. Reagents are actively being developed for other organisms such as *Dientamoeba fragilis*, *Blastocystis* spp., and the microsporidia. We have seen *Cyclospora cayetanensis* coccidia become well recognized as the cause of diarrhea in immunocompetent and immunocompromised humans. We continue to see new disease presentations in compromised patients; a good example is granulomatous amebic encephalitis caused by *Acanthamoeba* spp., *Sappinia diploidea*, and *Balamuthia mandrillaris*. With the expansion of transplantation options, many parasites are potential threats to patients who are undergoing immunosuppression, and these must be considered within the context of this patient group. Transfusion transmission of potential parasitic pathogens continues to be problematic. Transfusion in general is becoming more widely recognized as a source of infection, and donors are also more likely to come from many parasite-endemic areas of the world. It is also important to recognize the many neglected parasitic infections seen within the United States; indeed, the world continues to shrink in terms of infectious diseases.

With expanding regulatory requirements related to the disposal of chemicals, laboratories are continuing to review the use of mercury compounds as specimen fixatives and learning to become familiar with organism morphology when using substitute compounds. Permanent staining of fecal smears confirms...
that none of the substitute fixatives provide results of the same quality found with the use of mercuric chloride-based fixatives. However, the key issue is whether the intestinal parasites can be identified using these alternative fixatives, not how “perfect” they look. Many fixative options are now available, including single-vial collection systems, some of which are coupled with their own stains. Requirements also mandate that any laboratory using formalin must have formalin vapor monitored as both an 8-hour time-weighted average and 15-minute readings. Most laboratories are now familiar with the regulations on protection of health care workers from blood and other body fluids and have implemented specific changes that are no longer optional. Although laboratories were already using many of the safety recommendations, these regulations delineate in detail what must be done and documented. Regulatory information based on new shipping requirements is also included.

On the basis of excellent suggestions and comments, I have made the following changes in this new edition: (i) the chapter on case histories has been expanded and contains a large number of parasite medical case histories (case history, study questions, correct answer and discussion, and illustrative material); (ii) some of the life cycles have been redrawn, and new life cycles have been added; (iii) algorithms have been expanded; (iv) new tables and figures have been added throughout the book; (v) additional drawings and photographs have been added; (vi) extensive color images have replaced the black and white images; (vii) extensive updated text information is included, all of which was taken from a comprehensive literature review of all aspects of diagnostic medical parasitology; (viii) additional examples of unusual parasitic infections are included; (ix) the chapter on arthropods has been expanded and includes additional photographs and drawings and expanded text; (x) the chapter on the immunology of parasitic infections has been enlarged, and updated information on both antigen and antibody detection methods continues to be included in this edition; (xi) the chapter on histological identification of parasites has been dramatically expanded with diagrams of various parasites and their visual presentations in tissue sections, with greatly enhanced legends for all images; (xii) diagnostic methods using newer immunoassay and “dipstick” technology are included; and (xiii) the chapter on quality control has been expanded to include information on instrumentation and equipment, safety regulations, quality control and quality systems information, continuous quality improvement, and managed-care considerations. The appendixes have been expanded to contain more information on artifacts; expanded lists and photographs of products and commercial suppliers; algorithms for ordering specific tests that complement the ova and parasite examination; flowcharts for processing stool specimens; quality control recording sheets for use in the laboratory; and general references and relevant web sites. One of the most important expanded areas of the sixth edition is found in Appendix 7, which contains information that has been published within months prior to the final printing of this edition. This “late-breaking” synopsis of very recent publications can assist the reader in having access to the latest information available. I encourage you to review this section as you read various chapters throughout the book. A more comprehensive discussion of molecular methods has also been added to the sixth edition and can be found in Appendix 8. Appendix 9 contains comprehensive information on the most frequently asked questions for all aspects of human parasitology, and Appendix 10 contains information related to CPT coding for testing options for diagnostic parasitology.

The approach to the sixth edition of the book has been revised to present the diagnostic methods first, then the didactic discussion of parasitic infections.
as the second component of the book. This change was made to ensure that the most recent and relevant material would be updated right before editing. My objective is to provide the user with clear, concise, well-organized, clinically relevant, cost-effective, and practical quality procedures for use in the clinical laboratory setting. To use and fully understand these methods for the parasites discussed, it is imperative that the user also understand information related to life cycle, morphology, clinical disease, pathogenesis, diagnosis, treatment, epidemiology, and prevention. My intent is to provide a comprehensive discussion of both aspects of the field of diagnostic medical parasitology: first, relevant diagnostic methods designed to detect and identify the organisms present, and second, a comprehensive discussion of the individual parasites. I believe that the book fulfills these objectives and provides readers, whether they are laboratorians, physicians, or other health care professionals, with not only comprehensive, but very practical information.

It is also important for readers to understand that there are many diagnostic test options available to the clinical laboratory; not every laboratory will approach the diagnosis of parasitic infections in the same way. The key to quality and clinically relevant diagnostic work is a thorough understanding of the pros and cons of each option and how various options may or may not be relevant for one’s particular geographic area, laboratory size and range of expertise, client base, number and type of patients seen, personnel expertise and availability, equipment availability, educational initiatives, and communication options, just to name a few variables. However, it is also important to understand the regulations and technical recommendations that govern and guide this type of laboratory work; many of these guidelines are related to coding and reimbursement, proficiency testing, and overall clinical relevance.

The use of product names is not intended to endorse specific products or to exclude substitute products. Also, because of possible advances and changes in the therapy of parasitic infections, independent verification of drugs and drug dosages is always recommended. The diagnostic procedures are intended for laboratory use only by qualified and experienced individuals or by the personnel under their direct supervision. Every effort has been made to ensure accuracy; however, ASM Press and I encourage you to submit to us any suggestions, comments, and information on errors found.
Acknowledgments

Truant, Jerrold Turner, Saul Tzipori, Jacqueline A. Upcroft, Peter Upcroft, Tom van Gool, Eric Vanderslice, Jacob Verweij, Govinda Visvesvara, Marietta Voge, Susanne Wahlquist, Kenneth Walls, Rainer Weber, Wilfred Weinstein, Louis Weiss, P. P. Wilkins, John Williams, John Wilson, Marianna Wilson, Jeffrey J. Windsor, Washington Winn, Martin Wolfe, Donna Wolk, Johnson Wong, Lihua Xiao, Nigel Yeates, Judy Yost, Wenbao Zhang, Charles and Wiladene Zierdt, and many others whom I may have failed to mention specifically. If the information contained in this edition provides help to those in the field of microbiology, I will have succeeded in passing on this composite knowledge to the next generation of students and teachers.

Special thanks go to Sharon Belkin for her additional illustrations for this edition. I also thank Ronald Neafie from the Armed Forces Institute of Pathology for providing many photographs to illustrate several areas of the book, particularly the information on histological identification of parasites, and Herman Zaiman for providing slides that he has prepared and/or edited from many contributors worldwide. Very special thanks go to the group at the Centers for Disease Control and Prevention for the use of many of their clinical parasitology images; these images are invaluable to the microbiology community and include images contributed to CDC by many others, as well.

I would like to thank members of the editorial staff of ASM Press, especially Ellie Tupper; they are outstanding professionals and made my job not only challenging but fun.

Above all, my very special thanks go to my late husband, John, for his love and support for the many projects that I have been involved in over the years. I could never have undertaken these challenges without his help and understanding, a true partnership.
